Children, Schools, And Inequality Doris R Entwisle, 2018-03-05 Educational sociologists have paid relatively little attention to children in middle childhood ages 6 to 12 whereas developmental psychologists have emphasized factors internal to the child much more than the social contexts in explaining children s development Children Schools and Inequality redresses that imbalance It

examines elementary school outcomes e g test scores grades retention rates in light of the socioeconomic variation in schools and neighborhoods the organizational patterns across elementary schools and the ways in which family structure intersects with children s school performance Adding data from the Baltimore Beginning School Study to information culled from the fields of sociology child development and education this book suggests why the gap between the school achievement of poor children and those who are better off has been so difficult to close Doris Entwistle Karl Alexander and Linda Olson show why the first grade transition how children negotiate entry into full time schooling is a crucial period They also show that events over that time have repercussions that echo throughout children s entire school careers Currently the only study of this life transition to cover a comprehensive sample and to suggest straightforward remedies for urban schools Children Schools and Inequality can inform educators practitioners and policymakers as well as researchers in the sociology of education and child development
