Endangered Minds Endangered Minds:

Endangered Minds Jane M. Healy, 2011-07-19 Is today's fast paced media culture creating a toxic environment for our children's brains In this landmark bestselling assessment tracing the roots of America's escalating crisis in education Jane M Healy Ph D examines how television video games and other components of popular culture compromise our children's ability to concentrate and to absorb and analyze information Drawing on neuropsychological research and an analysis of current educational practices Healy presents in clear understandable language How growing brains are physically shaped by experience Why television programs even supposedly educational shows like Sesame Street develop habits of mind that place children at a disadvantage in school Why increasing numbers of children are diagnosed with attention deficit disorder How parents and teachers can make a critical difference by making children good learners from the day they are born

Endangered Minds Jane M. Healy, 1990 **Shades of Loneliness** Richard Stivers, 2004-02-09 To varying degrees loneliness has us all in its grip In this incisive and controversial book Richard Stivers rejects the recent emphasis on genetic explanations of psychological problems arguing that the very organization of technological societies is behind the pervasive experience of loneliness The extreme rationality that governs our institutions and organizations results in abstract and impersonal relationships in much of daily life Moreover as common meaning is gradually eroded our connections to others become vague and tenuous Our ensuing fear and loneliness however can be masked by an outgoing extroverted personality In its extreme form loneliness assumes pathological dimensions in neurosis and schizophrenia Stivers maintains that even here the causes remain social The various forms of neuroses and psychoses follow the key contradictions of a technological society For instance narcissism and depression reflect the tension between power and meaninglessness that characterizes modern societies Stivers demonstrates that there is a continuum from the normal technological personality through the various neuroses to full blown schizophrenia He argues that all forms of loneliness emanate from the same cause they likewise share a common dynamic despite their differences Loneliness in its many manifestations seems to be the price we must pay for living in the modern world Yet nurturing family friend and community ties can mitigate its culturally and psychologically disorganizing power This book is a clarion call for a renewal of moral awareness and custom to combat the fragmentation and depersonalization of our technological civilization **Endangered Minds: Why Children Don't**

Think--And What We Can Do about It Jane M. Healy, 1999-10 First published in 1990 Endangered Minds argues that children today aren't as able to concentrate analyze and think as clearly as in the past because of fast paced lifestyles and electronic media 17 500 **Endangered Minds** Jane M. Healy, 1999 Author links the inability of children to concentrate to the electronic media changes in life styles and the decline of literacy **The Sibling Society** Robert Bly, 1997-05-27 Where have all the grownups gone In answering that question with the same freewheeling erudition and intuitive brilliance that made Iron John a national bestseller poet storyteller and translator Robert Bly tells us that we live in a sibling society in

which adults have regressed into adolescence and adolescents refuse to grow up The Flickering Mind Todd Oppenheimer, 2004-12-07 The Flickering Mind by National Magazine Award winner Todd Oppenheimer is a landmark account of the failure of technology to improve our schools and a call for renewed emphasis on what really works American education faces an unusual moment of crisis For decades our schools have been beaten down by a series of curriculum fads empty crusades for reform and stingy funding Now education and political leaders have offered their biggest and most expensive promise ever the miracle of computers and the Internet at a cost of approximately 70 billion just during the decade of the 1990s Computer technology has become so prevalent that it is transforming nearly every corner of the academic world from our efforts to close the gap between rich and poor to our hopes for school reform to our basic methods of developing the human imagination Technology is also recasting the relationships that schools strike with the business community changing public beliefs about the demands of tomorrow s working world and reframing the nation s systems for researching testing and evaluating achievement All this change has led to a culture of the flickering mind and a generation teetering between two possible futures In one youngsters have a chance to become confident masters of the tools of their day to better address the problems of tomorrow Alternatively they can become victims of commercial novelties and narrow measures of ability underscored by misplaced faith in standardized testing At this point America s students can t even make a fair choice They are an increasingly distracted lot Their ability to reason to listen to feel empathy is quite literally flickering Computers and their attendant technologies did not cause all these problems but they are quietly accelerating them In this authoritative and impassioned account of the state of education in America Todd Oppenheimer shows why it does not have to be this way Oppenheimer visited dozens of schools nationwide public and private urban and rural to present the compelling tales that frame this book He consulted with experts read volumes of studies and came to strong and persuasive conclusions that the essentials of learning have been gradually forgotten and that they matter much more than the novelties of technology He argues that every time we computerize a science class or shut down a music program to pay for new hardware we lose sight of what our priority should be enlightened basics Broad in scope and investigative in treatment The Flickering Mind will not only contribute to a vital public conversation about what our schools can and should be it will define the debate **The Well-trained Mind** Susan Wise Bauer, Jessie Wise, 2004 This book will instruct you step by step on how to give your child an academically rigorous comprehensive education from preschool through high school Two veteran home educators outline the classical pattern of education he trivium which organizes learning around the maturing capacity of the child s mind the elementary school grammar stage the middle school logic stage and the high school rhetoric stage Using the trivium as your model you ll be able to instruct your child in all levels of reading writing history geography mathematics science foreign languages rhetoric logic art and music regardless of your own aptitude in those subjects Newly revised and updated The Well Trained Mind includes detailed book lists with complete ordering information up to date listings of resources publications

and Internet links and useful contacts **The Growth Of The Mind** Stanley I. Greenspan, Beryl Lieff Benderly, 1997 One of America's most prominent psychiatrists reveals the missing link between neuroscience and the qualities that make us fully human arguing that new child rearing patterns and impersonal technologies may interrupt the natural development of children Arcana of Spiritualism: a Manual of Spiritual Science and Philosophy Hudson Tuttle, 1871 **The Secret of a Quiet Mind** John Summerfield Bunting, 1929 The Public Mind Norman Angell, 1927 Mind and Body, 1902 *The Life of Mind* Elijah Jordan, 1925 **The Origin of Mind** Duren James Henderson Ward, 1924 *The "Mind the Paint" Girl* Louis Tracy, 1912 *The Pathology of mind* Henry Maudsley, 1880 The Evolution of Mind Joseph McCabe, 1910 The Mind of Mencius Ernst Faber, Mencius, 1882 **The Hygiene of Mind** Thomas Smith Clouston, 1907
