Energetic Materials At Extreme Conditions Springer Theses:

Energetic Materials at Extreme Conditions David I a Millar,2016-05-01 Nominated for a Springer prize this thesis explores the effects of extreme conditions on energetic materials and characterises new polymorphs obtained at high pressures and or temperatures It includes a superb analysis of future research opportunities Energetic Materials at Extreme Conditions David I.A. Millar,2011-09-24 David I A Millar s thesis explores the effects of extreme conditions on energetic materials His study identifies and structurally characterises new polymorphs obtained at high pressures and or temperatures The performance of energetic materials pyrotechnics propellants and explosives can depend on a number of factors including sensitivity to detonation detonation velocity and chemical and thermal stability Polymorphism and solid state phase transitions may therefore have significant consequences for the performance and safety of energetic materials In order to model the behaviour of these important materials effectively under operational conditions it is essential to obtain detailed structural information at a range of temperatures and pressures High-Pressure Crystallography Elena Boldyreva,Przemyslaw Dera,2010-08-20 This unique book is devoted to the theme of crystallographic studies at high pressure It places emphasis on the phenomena characteristic to the compressed state of matter as well as experimental and theoretical techniques used to study these phenomena Chemistry and Physics of Energetic Materials S.N. Bulusu,2012-12-06 This book represents a collection of lectures presented at the NATO Advanced study Institute ASI on Chemistry Physics of the Molecular Processes in Energetic Materials held at Hotel Torre Normanna Altavilla Milicia Sicily Italy September 3 to 15 1989 The institute was attended by seventy participants including twenty lecturers drawn from thirteen countries The purpose of the institute was to review the major advances made in recent years in the theoretical and experimental aspects of explosives and propellants In accordance with the format of the NATO ASI it was arranged to have a relatively small number of speakers to present in depth review type lectures emphasizing the basic research aspects of the subject over a two week period Most of the speakers gave two lectures each in excess of one hour with additional time for discussions The scope of the meeting was limited to molecular and spectroscopic studies since the hydrodynamic aspects of detonation and various performance criteria of energetic materials are often covered adequately in other international meetings An attempt was made to have a coherent presentation of various theoretical computational and spectroscopic approaches to help a better understanding of energetic materials from a molecular point of view The progress already made in these areas is such that structure property e g *Energy and Technology Review* , **Performance Characterization of Lubricants** Abhishek Kumar,Avinash Kumar,Ashwani Kumar,2024-11-14 The text discusses the fundamentals of lubrication science and technology linking the science concepts to engineering practices It further explores the performance characterization of lubrication systems by utilizing sophisticated experiments and tests and motivates the readers to develop their conclusions and reach solutions based on modern tools and techniques This book Presents the principles of surface and

lubricant chemistry and its implementation to devise engineering solutions for various application based systems Discusses viscosity index improvers tribology of green lubricants and biolubricants from non edible oils Highlights 2D nanomaterials lubricants biogreases hydrogel and lubricants for extreme temperature and pressure conditions Explains lubrication for electrical biomedical automobile marine turbine and aerospace applications Covers design considerations formulations and compositions of lubricants for high temperature applications in diverse areas Explores the simulation computational and empirical models to characterize quantify and mitigate the adverse effects of friction It is primarily written for senior undergraduate and graduate students and academic researchers in the fields of mechanical engineering production engineering industrial engineering aerospace engineering and manufacturing engineering *Inertial Fusion Sciences and Applications* 2003 B.
