Energy Capitals Joseph A. Pratt, Martin V. Melosi, Kathleen A. Brosnan, 2015-03-23 Fossil fuels propelled industries and nations into the modern age and continue to powerfully influence economies and politics today As Energy Capitals demonstrates the discovery and exploitation of fossil fuels has proven to be a mixed blessing in many of the cities and regions where it has occurred With case studies from the United States Canada Mexico Norway Africa and Australia this volume views a range of older and more recent energy capitals contrasts their evolutions and explores why some capitals were able to influence global trends in energy production and distribution while others failed to control even their own destinies Chapters show how local and national politics social structures technological advantages education systems capital infrastructure labor force supply and demand and other factors have affected the ability of a region to develop and control its own fossil fuel reserves The contributors also view the environmental impact of energy industries and demonstrate how in the depletion of reserves or a shift to new energy sources regions have or have not been able to recover economically The cities of Tampico Mexico and Port Gentil Gabon have seen their oil deposits exploited by international companies with little or nothing to show in return and at a high cost environmentally At the opposite extreme Houston Texas has witnessed great economic gain from its oil natural gas and petrochemical industries Its growth however has been tempered by the immense strain on infrastructure and the human transformation of the natural environment In another scenario Perth Australia Calgary Alberta and Stavanger Norway have benefitted as the closest established cities with administrative and financial assets for energy production that was developed hundreds of miles away Whether coal oil or natural gas the essays offer important lessons learned over time and future considerations for the best ways to capture the benefits of energy development while limiting the cost to local populations and environments     *Yearbook of Transnational History* Thomas Adam, 2020-09-22 The *Yearbook of Transnational History* is dedicated to disseminating pioneering research in the field of transnational history This third volume is dedicated to the transnational turn in urban history It brings together articles that investigate the transnational and transatlantic exchanges of ideas and concepts for urban planning architecture and technology that served to modernize cities across East and Central Europe and the United States This collection includes studies about regionals fairs as centers of knowledge transfer in Eastern Europe about the transfer of city planning among developing urban centers within the Austro Hungarian Empire about the introduction of the Bauhaus into American society and about the movement for constructing paved roads to connect cities on a global scale The volume concludes with a historiographical article that discusses the potential of the transnational perspective to urban history The articles in this volume highlight the movement of ideas and practices across various cultures and societies and explore the relations connections and spaces created by these movements The articles show that modern cities across the European continent and North America emerged from intensive exchanges of ideas for almost every aspect of modern urban life     Handbook on the

Geographies of Energy Barry D. Solomon, Kirby E. Calvert, 2017-12-29 This extensive Handbook captures a range of expertise and perspectives on the changing geographies and landscapes of energy production distribution and use Combining established and emerging scholarship from across disciplines the expert contributions provide a broad overview of research frontiers for the changing geographies of energy worldwide Interdisciplinary in nature and broad in scope it serves to answer a range of questions and provide the reader with conceptual and methodological foundations *American Lucifers* Jeremy Zallen, 2019-08-19 The myth of light and progress has blinded us In our electric world we are everywhere surrounded by effortlessly glowing lights that simply exist as they should seemingly clear and comforting proof that human genius means the present will always be better than the past and the future better still At best this is half the story At worst it is a lie From whale oil to kerosene from the colonial period to the end of the U S Civil War modern industrial lights brought wonderful improvements and incredible wealth to some But for most workers free and unfree human and nonhuman these lights were catastrophes This book tells their stories The surprisingly violent struggle to produce control and consume the changing means of illumination over the eighteenth and nineteenth centuries transformed slavery industrial capitalism and urban families in profound often hidden ways Only by taking the lives of whalers and enslaved turpentine makers match manufacturing children and coal miners night working seamstresses and the streetlamp lit poor those American lucifers as seriously as those of inventors and businessmen can the full significance of the revolution of artificial light be understood

**Power Moves** Kyle Shelton, 2017-12-15 Since World War II Houston has become a burgeoning internationally connected metropolis and a sprawling car dependent city In 1950 it possessed only one highway the Gulf Freeway which ran between Houston and Galveston Today Houston and Harris County have more than 1 200 miles of highways and a third major loop is under construction nearly thirty miles out from the historic core Highways have driven every aspect of Houston s postwar development from the physical layout of the city to the political process that has transformed both the transportation network and the balance of power between governing elites and ordinary citizens Power Moves examines debates around the planning construction and use of highway and public transportation systems in Houston Kyle Shelton shows how Houstonians helped shape the city s growth by attending city council meetings writing letters to the highway commission and protesting the destruction of homes to make way for freeways which happened in both affluent and low income neighborhoods He demonstrates that these assertions of what he terms infrastructural citizenship opened up the transportation decision making process to meaningful input from the public and gave many previously marginalized citizens a more powerful voice in civic affairs Power Moves also reveals the long lasting results of choosing highway and auto based infrastructure over other transit options and the resulting challenges that Houstonians currently face as they grapple with how best to move forward from the consequences and opportunities created by past choices **Abstracts of Public Administration, Development, and Environment** ,2007 **International Aerospace Abstracts** ,1977 **Comprehensive Dissertation Index** ,1989
