Running Buildings on Natural Energy Sue Roaf, Fergus Nicol, 2018-12-07 New thinking is essential if we are to design and occupy buildings that can keep us safe with unpredictable economies climates energy systems and resource challenges For too long designers have relied on mechanical solutions for heating cooling and ventilating buildings The 21st century dream has to be of a better architecture that enables buildings to be run for as much of a day or year as possible on local clean reliable affordable natural energy Examples are included from different climates where the fundamental building design is right its orientation opening sizes mass and its natural ventilation systems and pathways Many modern buildings are poorly designed for climate as manifested by growing incidences of overheating experienced indoor explored here The inability of many rating systems to record and improve the climatic design of buildings raises questions about how they deal with issues of basic building performance This book points the way towards how we can understand such problems and move forward from over mechanised poorly designed buildings to a new generation of adaptable buildings designed and refurbished to run largely on natural energy and capable of evolving over time to keep their occupants safe and comfortable even in a warming world The chapters were originally published in Architectural Science Review

Reinventing Fire Amory Lovins, 2013-09-11 Oil and coal have built our civilisation created our wealth and enriched the lives of billions Yet their rising costs to our security economy health and environment are starting to outweigh their benefits Moreover the tipping point where alternatives work better and compete purely on cost is not decades in the future it is here and now And that tipping point has become the fulcrum of economic transformation In Reinventing Fire Amory Lovins and the Rocky Mountain Institute offer a new vision to revitalise business models and win the clean energy race not forced by public policy but led by business for long term advantage This independent and rigorous account offers market based solutions integrating transportation buildings industry and electricity It maps pathways for

running a 158% bigger US economy in 2050 but needing no oil no coal no nuclear energy one third less natural gas and no new inventions This transition would cost 5 trillion less than business as usual without counting fossil fuels huge hidden costs Whether you care most about profits and jobs or national security or environmental stewardship climate and health Reinventing Fire makes sense It s a story of astounding opportunities for creating the new energy era Publisher description
