A Dictionary of Scientific Units H. G. Jerrard, Donald Burgess McNeill, 1964

Dictionary of Scientific Units of Measurement - Volume II D. S. Dawoud, A. G. Batte, 2024 Since the appearance of humanities on earth and since human beings started to have activities the need for measuring units appeared Measuring weight distance length and time were the first tasks to be measured This is why weights and measures were among the earliest tools invented by man Primitive societies needed rudimentary measures for many tasks constructing dwellings of an appropriate size and shape fashioning clothing or bartering food or raw materials Man understandably turned first to parts of the body and the natural surroundings for measuring instruments Early Babylonian and Egyptian records and the Bible indicate that length was first measured with the forearm hand or finger and that time was measured by the periods of the sun moon and other heavenly bodies With time many societies started to appear worldwide and because of the lack of communication between them each society developed its local units of measurement As societies became nearer to each other common interest

started to appear and the need to have common units of measurements started to be a must With time and with the development of societies and since more and more quantities started to be measured the need for modern units such as S I units became a necessity This dictionary before giving the definitions for the different units of measurements gives at first a good idea about the most current systems of units including the SI system The dictionary has 2450 entries each defining one of the currently used units including local units Besides that it gives a summary for 1400 units
