Social Network Analysis David Knoke, Song Yang, 2019-12-02 David Knoke and Song Yang's Social Network Analysis Third

Edition provides a concise introduction to the concepts and tools of social network analysis. The authors convey key material while at the same time minimizing technical complexities. The examples are simple sets of 5 or 6 entities such as individuals, positions in a hierarchy, political offices and nation states and the relations between them include friendship, communication, supervision, donations and trade. The new edition reflects developments and changes in practice over the past decade. The authors also describe important recent developments in network analysis, especially in the fifth chapter. Exponential random graph models (ERGMs) are a prime example when the second edition was published. P models were the recommended approach for this but they have been replaced by ERGMs. Finally throughout the volume the authors comment on the challenges and opportunities offered by internet and social media data.

State of the Art Applications of Social Network Analysis Fazli Can, Tansel Özyer, Faruk Polat, 2014-05-14. Social network analysis increasingly bridges the discovery of patterns in diverse areas of study as more data becomes available and complex. Yet the construction of huge networks from large data often requires entirely different approaches for analysis including graph theory, statistics, machine learning and data mining. This work covers frontier studies on social network analysis and mining from different perspectives such as social network sites, financial data, e-mails, forums, academic research, funds, XML technology, blog content, community detection and clique finding, prediction of user's behavior, privacy in social network analysis, mobility from spatio-temporal point of view, agent technology and political parties in parliament. These topics will be of interest to researchers and practitioners from different disciplines including but not limited to social sciences and engineering.

Predictive Technology in Social Media Cristina Fernández-Rovira, Santiago Giraldo-Luque, 2022-07-07. Can behaviour on social media predict future purchase patterns? Can what we click on social media foresee which political party will we vote for? Can the information we share on our wall foretell the next series I might want to watch? Can the likes on Instagram and Facebook predict the time one will spend on digital platforms in the next hour? The answer is no longer science fiction. It points to the ability of mainstream social media platforms such as Facebook and Twitter to be able to deliver specialised advertising services to highly targeted audience segments controlled by the billions of devices that flood our daily lives. At the same time it highlights a more relevant problem: can social media guide, suggest or impose a certain behaviour or thought? Everything seems to indicate that they can do it. Predictive Technology in Social Media comprises 10 essays that reflect on the power of the predictive technology of social media in culture, entertainment, marketing, economics and politics. It shows from a humanistic and critical perspective the predictive possibilities of social media platforms as well as the risks this entails for cultural plurality, everyday consumption, the monopolistic concentration of the economy and attention and democracy. The text is an invitation to think as citizens about the unbridled power we have ceded to digital platforms. A new voice to warn about the greatest concentration of communicative power ever seen in the history of humanity.
