**Encyclopedic Dictionary of Named Processes in Chemical Technology** Alan E. Comyns, 2010-12-12 This reference provides concise descriptions of those chemical processes that are known by special names which are not obvious or self explanatory. Containing 2 600 entries this second edition includes information on the many new processes developed and commercialized as well as new information on old processes. *Encyclopedic Dictionary of Named Processes in Chemical Technology* presents a heterogeneous collection of names, inventors, companies, institutions, places, acronyms, abbreviations and obvious corruptions of the chemical nomenclature. The author has tailored the entries to reflect importance and topicality. Generally the processes in current use have the longest entries; however, he also devotes more space to some obsolete processes that hold particular technical interest or historical significance. The appendix is an index to product names enabling readers to identify processes used for making particular products. *Encyclopedic Dictionary of Named Processes in Chemical Technology* Alan E. Comyns, 2014-02-21 Since the third edition of this reference was completed, there have been major changes in the global chemical industry. With less emphasis on new processes for making basic chemicals and more emphasis on pollution prevention and waste disposal, petrochemical processes are giving way to biochemical processes. These changes are reflected in the new p **Encyclopedic Dictionary of Named Processes in Chemical Technology, Third Edition** Alan E. Comyns, 2007-06-07 Recommended by Choice Current Reviews for Academic Libraries. Covering a broad spectrum of chemical technology from the gigantic Bessemer process for making steel to the microscopic Manassevit process for applying circuits to silicon chips, the *Encyclopedic Dictionary of Named Processes in Chemical Technology Third Edition* includes all those processes that are known by special names regardless of origin or use. Extensively revised and expanded, this third edition incorporates named processes in current commercial use anywhere in the world, those piloted on a substantial scale as well as important obsolete processes. Defining more than 3000 processes, 450 of which are new to this edition, this encyclopedic dictionary reflects recent trends in the global chemical industry away from petrochemicals and toward pollution prevention and waste disposal. It also includes processes newly revealed under the Freedom of Information Acts in the US and UK. Each entry is tailored to reflect the importance and topicality of the process, providing key reference information: detailed explanation of how the process works; derivation of the name; historical background; date of introduction; patent information; worldwide usage; and end product. The dictionary features a foreword by the widely respected chemical technology historian Prof. Colin A. Russell, extensive cross references, bibliographical references, and an appendix that lists the chemicals and materials that are described in one or more of the processes. Gathering and defining a large portion of special named processes that may fall outside of standard chemical texts or be scattered among industry manuals, *Encyclopedic Dictionary of Named Processes in Chemical Technology Third Edition* provides a single source reference to an extensive array of named processes. *Dictionary of Named Processes in Chemical Technology* Alan E. Comyns, 1993 The literature of

chemical technology is replete with special process terms such as Solvay Oxo and Wacker Although many such terms are used among a wide variety of chemists many others are unique to specific industries This up to date dictionary collects concise descriptions of nearly 3 000 common and highly specialized chemical processes used across a range of settings It covers all industrial processes in which chemical reactions occur not merely those of the chemical industry With helpful references to additional source materials the dictionary will serve as an invaluable resource for practicing chemists and chemical engineers teachers of industrial chemistry and historians of chemistry and chemical technology
