 International Conference on Laser Spectroscopy EICOLS 87 was held at the Sunwing Hotel in Åre, Sweden, June 22-26, 1987.
 Following the traditions of its predecessors at Vail, Megeve, Jackson Lake, Rottach, Egern, Jasper Park, Interlaken, and Maui, the
 intent of EICOLS 87 was to provide a forum for active scientists to meet in an informal atmosphere to discuss recent
 developments in laser spectroscopy. The scenic and remote location of the conference venue greatly stimulated a lively and
 relaxed exchange of information and ideas. The conference was attended by 227 scientists from 20 countries including
 Australia, Austria, Canada, the People's Republic of China, Denmark, Finland, France, the Federal Republic of Germany, Israel, Italy,
 Japan, The Netherlands, New Zealand, Norway, Poland, the Soviet Union, Sweden, Switzerland, the United Kingdom, and the
 United States. The scientific program included 14 topical sessions with 50 invited talks ranging in length from 20 to 40
 minutes. About 70 additional invited contributions were presented in two evening poster sessions. A third evening session
 included 4 oral and 18 poster post-deadline presentations. Brilliant! Bob Johnstone, 2015-02-03 A revolution in the way we
 use artificial lighting is underway, one that is every bit as sweeping and significant as Edison's invention of the light bulb. The
 technology of light-emitting diodes (LEDs) is ready for widespread implementation. Its impacts will include a reduction in
 energy consumption for electric lighting by up to 80 percent. Brilliant tells the story of Shuji Nakamura, a gifted Japanese
 engineer who came out of nowhere to stun the world with his announcement that he had created the last piece in the puzzle
 needed for manufacturing solid-state white lights. The invention of this holy grail product, which promises to make Edison's
 light bulb obsolete, had eluded the best minds at the top electronic firms for twenty-five years. Until his startling
 announcement, Nakamura had not even been on the radar screen of most industry observers. Veteran technology writer Bob
 Johnstone traces the career of Nakamura, which included many years of obstinate individual effort as well as a dramatic legal
 battle pitting him against his former Japanese employer. Over a five-year span, Nakamura distinguished himself with an
 unprecedented series of inventions: bright blue-green ultraviolet and then white LEDs, plus a blue laser that will play an
 essential role in the next generation of DVD players. Then he was forced to leave Nichia Chemical, the company where he had
 worked for twenty years, and his former employer sued him. The result was a multimillion-dollar settlement in a landmark
 decision that acknowledged for the first time the rights of individual inventors working in a corporate context. Today,
 Nakamura holds a professor's chair at the University of California at Santa Barbara, where he continues to develop the
 technology of LEDs. Johnstone, the first Western journalist to meet and interview Nakamura, has received the brilliant
 engineer's full cooperation through a series of exclusive interviews given for the book. Johnstone has also interviewed other
 key players in the imminent lighting revolution, providing an exciting preview of the technological, entrepreneurial, and artistic
 creativity that will soon be unleashed by Nakamura's inventions. **American Journal of Physics**, 2007 **Parallel**
