**Livewired** David Eagleman,2020-08-25 You will never think about your brain in the same way again The brain is often portrayed as an organ with different regions dedicated to specific tasks But that textbook model is wrong The brain is a dynamic system constantly modifying its own circuitry to match the demands of the environment and the body in which it finds itself If you were to zoom into the living microscopic cosmos inside the skull you would witness tentacle like extensions grasping bumping sensing searching for the right connections to establish or forego like denizens of a country establishing friendships marriages neighbourhoods political parties vendettas and social networks It s a mysterious kind of computational material an organic three dimensional textile that adjusts itself to operate with maximum efficiency The brain is not hardwired David Eagleman contends it is livewired With his new theory of infotropism Eagleman demonstrates why the fundamental principle of the brain is information maximization in the same way that plants grow toward light brains reconfigure to boost data from the outside world Follow Eagleman on a thrilling journey to discover how a child can function with one half of his brain removed how a blind man can hit a baseball via a sensor on his tongue how new devices and body plans can enhance our natural capacities how paralyzed people will soon be able to dance in thought controlled robotic suits how we can build the next generation of devices based on the principles of the brain and what all this has to do with why we dream at night

*Brain Changer* David Disalvo,2013-11-12 Let s be honest You ve tried the sticky note inspirations the motivational calendar and the cute but ineffective carpe diem mug yet your attitude hasn t changed It s time to apply cutting edge science to the challenges of daily life While everyone desires self improvement we are quickly frustrated when trying to implement the contradictory philosophies of self appointed self help gurus Too often their advice is based on anecdote and personal opinion not real research Bestselling author of What Makes Your Brain Happy and Why You Should Do the Opposite David DiSalvo returns with Brain Changer How Harnessing Your Brain s Power to Adapt Can Change Your Life Drawing on the latest research in neuroscience cognitive psychology behavioral economics communications and even marketing DiSalvo replaces self help with science help He demonstrates how the brain s enormous capacity to adapt is the most crucial factor influencing how we feel and act a factor that we can control to change our lives Findings show our brains are fluid and function much like a feedback loop stimulants from both our environment and from

within ourselves catalyze changes in the brain's response. That response then elicits additional inputs that the brain identifies and analyzes to further tailor its response. DiSalvo shows that the greatest internal tool we have to affect the feedback loop is metacognition: thinking about thinking. Littered with relatable examples and tackling major aspects of our lives including relationships, careers, physical health, and personal development, *Brain Changer* shows you how to harness metacognition to enrich your life.

Rewired Carl D. Marci, 2022-01-01 Living in an age of digital distraction has wreaked havoc on our brains, but there's much we can do to restore our tech-life balance. We live in a world that is always on where everyone is always connected. But we feel increasingly disconnected. Why? The answer lies in our brains. Carl D. Marci, MD, a leading expert on social and consumer neuroscience, reviews the mounting evidence that overuse of smart phones and social media is rewiring our brains, resulting in a losing deal: we are neglecting the relationships that sustain us and keep us healthy in favor of weaker and more ephemeral ties. The ability to connect and form strong social bonds is fundamental to human experience and emerged through unique structures in our brains. But ever more powerful technologies and ubiquitous access to media have hijacked our need to connect intimately and emotionally with others. The quick highs of clicking like and swiping right overstimulate the same neurological reward centers associated with social relationships. The habits that accompany our digital lifestyles are putting tremendous pressure on critical components of the brain associated with attention, emotion, and memory, changing how we process information and altering how we communicate and relate, even at a physiological level. As a psychiatrist working at the forefront of research on the impact of digital technology, Marci has seen this transformation up close and developed a range of responses. *Rewired* provides scientifically supported solutions for everyone who wants to restore their tech-life balance: from parents concerned about their children's exposure to the internet to stressed workers dealing with the deluge of emails and managing the expectation of 24/7 availability.
