

EXPERIMENTAL PSYCHOLOGY

Experimental psychology is a branch of psychology that focuses on conducting systematic and controlled experiments to study human behavior and cognition.

OVERVIEW

Experimental psychology aims to gather empirical evidence and explore cause-and-effect relationships between variables. Experimental psychologists utilize various research methods, including laboratory experiments, surveys, and observations, to investigate topics such as perception, memory, learning, motivation, and social behavior.

EXAMPLE

- **Pavlov's Dog:** This experimental psychology experiment used scientific methods to develop a theory about how learning and association occur in animals. The same concepts were subsequently used in the study of humans, wherein psychology-based ideas about learning were developed. Pavlov's use of the empirical evidence was foundational to the study's success.

Experimental Psychology R.B. Burns, C.B. Dobson, 2012-12-06 This book has been written to meet several needs Firstly there is a need for a book which integrates statistics research design experiments and report writing so that none is learned in a vacuum as commonly is the case isolated from the others The aim is to make the student an active learner encouraged to carry out experiments so experiencing and understanding the design problems and statistical analyses in the practical context where he can see exactly what he is doing and why The aim is that by the end of the book the student should be able to evaluate the research of others to define a problem formulate a hypothesis about it design and carry out the experiment apply the correct statistics discuss the results and implications and write it all up in a logical and sensible fashion The principle is that old pedagogic one of learning by doing Secondly there is a need for an introductory text on statistics research design and experimental work for the many students who meet psychology and social science for the first time The initiate in behavioural science needs to gain a conceptual understanding of statistical procedures and design techniques in order to carry out his own investigations and to understand and evaluate constructively the investigations of others However experience has shown us that many students and even some fellow teachers are somewhat reluctant to study this area as they believe it is difficult and involves mathematics
