Directorate-General for Telecommunications, Information Industries, and Innovation, 1988 Part1 Advanced microelectronics VLSI technologies comparisons and prospects Software technology Advanced information processing Part2 Office systems Computer integrated manufacturing Information exchange system *CAD Data Transfer for Solid Models* E.G. Schlechtendahl, 2013-11-11 Principal authors U Kroszynski B Palstr9Sm 1 1 The evolution of concepts and specifications for CAD data exchange The CAD CAM community has witnessed during the last decade the appearance of several specifications as well as proposals for standards which either attempt to cover wider areas or to be more reliable and stable than the others With the rapid evolution of both hardware and software the capabilities offered by CAD systems and CAD based application systems are far more advanced than they were only ten years ago even when they are now based on micro computers or personal computers The situation with standards however is not and cannot be so In order to be reliable and accepted by a wide community of both vendors and users a standard has to be stable This implies a life span of at least a decade This also implies that the standard has to be general and flexible enough to accommodate present as well as expected future developments 1 1 1 IGES The initial development of concepts for CAD data exchange is strongly influenced by the US Integrated Computer Aided Manufacturing ICAM programme that dealt with the development of methods for data exchange In September 1979 a subgroup was established with participation of the National Bureau of Standards the General Electric Company and the Boeing Company The result of this effort was the Initial Graphics Exchange Specification IGES that was published as a NBS report 61 in 1980 ESPRIT Success Stories for the Information Society, 1997 *Computer Aided Design* Mr. Rohit Manglik, 2024-05-16 Focuses on the principles and applications of Computer Aided Design CAD enabling precise modeling drafting and simulation in engineering design **Natural Language Processing: The PLNLP Approach** Karen Jensen, George E. Heidorn, Stephen D. Richardson, 2012-12-06 Natural language is easy for people and hard for machines For two generations the tantalizing goal has been to get computers to handle human languages in ways that will be compelling and useful to people Obstacles are many and legendary Natural Language Processing The PLNLP Approach describes one group's decade of research in pursuit of that goal A very broad coverage NLP system including a programming

language PLNLP development tools and analysis and synthesis components was developed and incorporated into a variety of well known practical applications ranging from text critiquing CRITIQUE to machine translation e g SHALT This books represents the first published collection of papers describing the system and how it has been used Twenty six authors from nine countries contributed to this volume Natural language analysis in the PLNLP approach is done in six stages that move smoothly from syntax through semantics into discourse The initial syntactic sketch is provided by an Augmented Phrase Structure Grammar APSG that uses exclusively binary rules and aims to produce some reasonable analysis for any input string Its approximate analysis passes to the reassignment component which takes the default syntactic attachments and adjusts them using semantic information obtained by parsing definitions and example sentences from machine readable dictionaries This technique is an example of one facet of the PLNLP approach the use of natural language itself as a knowledge representation language an innovation that permits a wide variety of online text materials to be exploited as sources of semantic information The next stage computes the intrasentential argument structure and resolves all references both NP and VP anaphora that can be treated at this point in the processing Subsequently additional components currently not so well developed as the earlier ones handle the further disambiguation of word senses the normalization of paraphrases and the construction of a paragraph discourse model by joining sentential semantic graphs Natural Language Processing The PLNLP Approach acquaints the reader with the theory and application of a working real world domain free NLP system and attempts to bridge the gap between computational and theoretical models of linguistic structure It provides a valuable resource for students teachers and researchers in the areas of computational linguistics natural processing artificial intelligence and information science
