Plant Extracts Cristina Delerue Matos, Francisca Rodrigues, 2022-01-25 Society has recently demonstrated a high level of awareness and responsibility concerning environmental issues. The interest in bioactive compounds extracted from natural sources has increased due to their potential application as active ingredients in several industries, particularly the cosmetic, food, and pharmaceutical industries. Plants are rich sources of phenolic compounds that have been widely studied due to their health-promoting properties, namely antioxidant, anti-carcinogenic, and anti-inflammatory activities, among others. Extraction is usually the limiting analytical step in the yield of bioactive compounds. From a green point of view, many extraction techniques have been employed as potential candidates to replace conventional methods such as ultrasound-assisted extraction, UAE, pressurized liquid extraction, PLE, microwave-assisted extraction, MAE, supercritical fluid extraction, SFE, pulsed electric field extraction, and enzyme-assisted extraction. In this Special Issue, we focus our attention on the chemical characterization of plant extracts and their bioactive composition, focusing also on *in vitro* cell assays and molecular tools. The issue comprises original research articles as well as a review on topics such as phenolic profile, radical scavenging capacity, *in vitro* cell assays, comet assay, and antimicrobial capacity. We close this Special Issue with a review paper that focuses on the pharmacological activities of quercetin, one of the principal polyphenols. With this, we aim to provide a contemporary overview of the advantages of bioactive compounds extracted from plants.

Botanical Extracts Arshad Farid, Ab Waheed Wani, S. M. Firdous, Mukul Machhindra Barwant, 2026-02-11 This book provides an overview of botanical extract development, their standardization, advanced analytical technologies, and innovative applications in pharmaceuticals, nutraceuticals, and sustainable agriculture. The chapters introduce the historical evolution of botanical extracts and the fundamental roles of secondary metabolites. It further explores traditional and modern extraction techniques, the impact of extraction methods on extract efficacy, and advanced analytical technologies including HPLC, mass spectrometry, and AI-driven approaches for quality control. Further, the book presents biotechnological and nanotechnological advances in extraction and delivery systems, discusses the pharmacokinetics and pharmacodynamics of botanical compounds, and highlights challenges such as adulteration and supply chain variability. Towards the end, the book addresses emerging applications of extract in eco-friendly agriculture, as well as marine botanical extracts, innovative formulation strategies, and future trends in botanical research and development.
