Analysis, Design and Construction of Foundations
Yung Ming Cheng, Chi Wai Law, Leilei Liu, 2021-02-21 *Analysis, Design and Construction of Foundations* outlines methods for analysis and design of the construction of shallow and deep foundations with particular reference to case studies in Hong Kong and China as well as a discussion of the methods used in other countries. It introduces the main approaches used by geotechnical and structural engineers and the precautions required for planning design and construction of foundation structures. Some computational methods and computer programmes are reviewed to provide tools for performing a more realistic analysis of foundation systems. The authors examine in depth the methods used for constructing shallow foundations, deep foundations, excavation and lateral support systems, slope stability analysis and construction and ground monitoring for proper site management. Some new and innovative foundation construction methods are also introduced. It is illustrated with case studies of failures and defects from actual construction projects. Some advanced and modern theories are also covered in this book. This book is more targeted towards the understanding of the basic behavior and the actual construction of many geotechnical works and this book is not dedicated to any design code or specification though Euro codes and Hong Kong code are also used in this book for illustration. It is ideal for consulting geotechnical engineers, undergraduate and postgraduate students.

Precast Concrete Raft Units J.W. Bull, 2012-12-06 The use of precast concrete is a well established construction technique for beams, floors, panels, piles, walls and other structural elements. The advantages of precasting include excellent quality control, economical large scale production, improved construction productivity, especially in adverse weather conditions and immediate structure availability. These advantages have been recognized for precast concrete raft pavement units since their introduction in the 1930s. In the last ten years there has been a

considerable increase in the use of raft units especially in their range of applications their analysis and their design. However the description of these developments has been published in academic journals and conference proceedings which are not readily available to practising raft unit pavement design engineers. Pavement design engineers are under increasing pressure to produce raft unit designs that are inexpensive, long lasting and able to allow reorganization to accommodate changing use and uncertainty of future loading requirements. This is the first book devoted to raft unit pavements and will become a standard work of reference.

Advances in Analysis and Design of Deep Foundations Murad Abu-Farsakh, Khalid Alshibli, Anand Puppala, 2017-07-11. This volume on Advances in Analysis and Design of Deep Foundations contains 22 technical papers which cover various aspects of analysis and design of deep foundations based on full scale field testing, numerical modeling and analytical solutions. The technical papers are 8-10 pages long that present the results and findings from research as well as practical oriented studies on deep foundations that are of interest to the civil geotechnical engineering community. The topics cover a wide spectrum of applications that include evaluation of the axial and lateral capacity of piles, pile group effects, evaluation of the increase in pile capacity with time or pile setup, influence of excavation on pile capacity, study the behavior of pile raft caisson foundations, evaluate the bearing capacity and settlement of piles from cone penetration tests etc. This volume is part of the proceedings of the 1st GeoMEast International Congress and Exhibition on Sustainable Civil Infrastructures, Egypt 2017.
