Thyroid Nodule Classification in Medical Ultrasound Images using Enhanced Feature Extraction Techniques Mr. T. Manivannan, Dr. A. Nagarajan, 2025-10-24 [Feature Extraction and Classification in Context of Machine Learning](#) 1st Neelam Sanjeev Kumar, 1st, 2nd P Nirmalkumar, 2nd, 3rd Kareemullah H, 3rd, 2021-12-19

Research and development over the past decades have led to significant advances in the field of Pattern Recognition A textbook covering the basics of attributes and feature selection is the need of the day The author has made a sincere attempt to meet these requirements The various concepts of the subject are arranged logically and explained in a simple reader friendly language For a proper understanding of the subject a large number of examples with their step by step solutions are provided for every concept Illustrative examples are discussed to emphasize conceptual clarity thereby presenting typical applications Highlight extraction or dimensionality decrease is a fundamental piece of many AI applications The need for highlight extraction originates from the source of dimensionality and the high computational expense of controlling high layered information In this theory we center around how to enhance extraction and arrangement of feature extraction This highly encouraging impact of feature extraction motivated me to look into ways to write the book and create it for attribute selection

Genetic Algorithm Optimized Feature Extraction and Selection for ECG Pattern Classification Zhijian Huang, 2002 [Prominent Feature Extraction for Sentiment Analysis](#) Basant Agarwal, Namita Mittal, 2015-12-14

The objective of this monograph is to improve the performance of the sentiment analysis model by incorporating the semantic syntactic and common sense knowledge This book proposes a novel semantic concept extraction approach that uses dependency relations between words to extract the features from the text Proposed approach combines the semantic and common sense knowledge for the better understanding of the text In addition the book aims to extract prominent features from the unstructured text by eliminating the noisy irrelevant and redundant features Readers will also discover a proposed

method for efficient dimensionality reduction to alleviate the data sparseness problem being faced by machine learning model Authors pay attention to the four main findings of the book Performance of the sentiment analysis can be improved by reducing the redundancy among the features Experimental results show that minimum Redundancy Maximum Relevance mRMR feature selection technique improves the performance of the sentiment analysis by eliminating the redundant features Boolean Multinomial Naive Bayes BMNB machine learning algorithm with mRMR feature selection technique performs better than Support Vector Machine SVM classifier for sentiment analysis The problem of data sparseness is alleviated by semantic clustering of features which in turn improves the performance of the sentiment analysis Semantic relations among the words in the text have useful cues for sentiment analysis Common sense knowledge in form of ConceptNet ontology acquires knowledge which provides a better understanding of the text that improves the performance of the sentiment analysis

Method for Video Based Human Action Recognitions Ashok Ramadass,University of Texas at Dallas. Graduate Program in Computer Science,2010 In this work we focus on the issue of improving the quality of low level 2D feature extraction for human action recognition For instance existing algorithms such as the Optical Flow algorithm detects noisy and irrelevant features because of its lack of ground truth data sets for complex scenes For these features it is difficult to extract data such as coordinate positions of the features velocity and the direction of the moving objects and the differential data information between different frames Extracting such low level feature data is one of the major steps involved in video based Human action recognition Our work proposes an extended Optical Flow algorithm focusing on human actions This uses a Frame Jump technique along with thresholding of unwanted features to overcome the problems due to complex scenes Frame Jump restricts to detecting only useful features by removing other noisy and irrelevant features detected by the existing Optical Flow algorithm In addition to the above it also elucidates the integration of the proposed technique with other feature extraction algorithms **Unsupervised Feature Extraction Applied to Bioinformatics** Y-h Taguchi,2020 This book

proposes applications of tensor decomposition to unsupervised feature extraction and feature selection The author posits that although supervised methods including deep learning have become popular unsupervised methods have their own advantages He argues that this is the case because unsupervised methods are easy to learn since tensor decomposition is a conventional linear methodology This book starts from very basic linear algebra and reaches the cutting edge methodologies applied to difficult situations when there are many features variables while only small number of samples are available The author includes advanced descriptions about tensor decomposition including Tucker decomposition using high order singular value decomposition as well as higher order orthogonal iteration and train tenor decomposition The author concludes by showing unsupervised methods and their application to a wide range of topics Allows readers to analyze data sets with small samples and many features Provides a fast algorithm based upon linear algebra to analyze big data Includes several applications to multi view data analyses with a focus on bioinformatics *Selected Aspects of Interactive Feature Extraction* Marek Grzegorowski,2021 Keywords feature extraction feature selection rough set theory
