**Sciences** Alessandro Minelli, 2021-02-24 Recent and ongoing debates in biology and the philosophy of biology reveal a widespread dissatisfaction with traditional explanatory frameworks There are also problems with the current definitions or circumscriptions of key concepts such as gene species and homology and even of whole disciplinary fields within the life sciences e g developmental biology These contrasting views are arguably a symptom of the need to revisit traditional unchallenged partitions between the specialist disciplines within the life sciences In the diversity of topics addressed and approaches to move beyond the current disciplinary organization the five essays in this volume will hopefully stimulate further exploration towards an improved articulation of life sciences      **Organisational Transformation and Scientific**

**Change** Richard Whitley, Jochen Glaser, 2014-06-06 The first part of this book deals with the transformation of universities as strategic organisational actors in some cases creating them as such while the second shows how governance and authority shifts are affecting the kinds of research goals being pursued by academics in different public science systems

Dieter Kogler, 2017-10-02 Economic geographers increasingly consider the significance of history in shaping the contemporary socio economic landscape and increasingly believe that experiences and competencies acquired over time by individuals and entities in particular localities to a large degree determine present configurations as well as future regional trajectories Attempts to trace understand and investigate the pathways from past to present have given rise to the thriving and exciting sub field of Evolutionary Economic Geography EEG EEG highlights the important factors that initiate inhibit or consolidate the contextual settings and relationships in which regions and their respective agents which comprise and shape economic activity and social reproduction change over time It has at its core the production and destruction of novelty in space and the links between innovation and regional economic fortunes The creation of knowledge its movement and recombination within different regional ensembles of economic agents and institutions plays a critical role in the evolution of the space economy EEG provides a framework to disentangle the complexity of technological change and regional economic development based on a variety of theoretical and methodological approaches In only a short time EEG has established itself as a promising and rapidly evolving research framework with its focus on the driving forces of regional development across various scales and its attempt to translate findings into public policy This book advances the theoretical foundations of EEG and demonstrates how EEG utilises and operationalises conceptual frameworks both established and new Contributions also point to future research avenues and extensions of EEG attempting to build stronger ties between theory empirical evidence and relevance to policy This book was originally published as a special issue of Regional Studies      Forms of Becoming

Alessandro Minelli, 2022-04-12 What comes first form or function Trumpeted as the future of biological science evolutionary developmental biology or evo devo answers this fundamental question by showing how evolution controls the development of organisms In *Forms of Becoming* Alessandro Minelli a leading international figure in the field takes an in depth and comprehensive look at the history and key issues of evo devo Spirited and insightful this book focuses on the innovative ways animal organisms evolve through competition and cooperation Minelli provides a complete overview of conceptual developments from the fierce nineteenth century debates between the French biologists Geoffroy and Cuvier who fought over questions of form versus function to modern theories of how genes dictate body formation The book s wide ranging topics include expression patterns of genes developmental bias the role of developmental genes and genetic determinism Drawing from diverse examples such as the anatomy of butterflies giraffes Siamese twins and corals Minelli extends and reformulates important concepts from development evolution and the interplay between the two Presenting the accessible and cutting edge ideas of evolutionary developmental biology *Forms of Becoming* is fascinating reading for anyone interested in genetics and the animal form
