

EVOLUTIONARY PERSPECTIVE

-seeks to identify behavior in today's humans that is the result of our genetic inheritance from our ancestors.

* grew out of the work of Charles Darwin who argued in *The Origin of the Species* that a process of natural selection creates traits in a species that are adaptive to their environment

* argues that our genetic inheritance determines not only such physical traits as skin and eye color, but certain personality traits and social behaviors

Evolutionary Perspectives On Human Development:

Evolutionary Perspectives on Human Development Robert G. Burgess, Kevin MacDonald, 2005 This new edition of *Evolutionary Perspectives on Human Development* is obligatory reading for anyone interested in the integration of evolutionary theory into developmental psychology. It provides a valuable corrective to recent narrow approaches which argue that the human mind is constructed exclusively of domain specific mechanisms and which deemphasize the importance of human psychological and behavioral plasticity. Anyone who reads this book will come away with a richer understanding of our shared human nature. Bill Irons, Northwestern University. In this volume Burgess and MacDonald have brought together a distinguished group of psychologists and anthropologists to investigate how given our evolutionary heritage genetic make up and salient environment behavior cognition and emotion unfold from the human organism. They make clear that both evolutionary functional and proximate behavioral perspectives are essential to understanding the human mind and its products. Many of these essays should be required reading for sociobiologists evolutionary psychologists and evolutionary anthropologists and their ilk. Jeffrey Kurland, Penn State. It is clear that evolutionary biology has a tremendous amount to offer when it comes to our understanding of human development and yet many experts in developmental psychology have remained impervious to these insights. At last this may change. Burgess and MacDonald have compiled a rich array of theory and data much of it contributed by the leading lights of evolutionary psychology or if you prefer sociobiology. A very valuable collection and one that might help define a new and important field. David P. Barash, University of Washington. *Evolutionary Perspectives on Human Development* Second Edition considers the role of evolutionary theory in the field of developmental psychology to examine key topics of individual human development. This unique book fills an important gap in the literature applying evolutionary models to human development by focusing on central development issues. The book emphasizes both domain general evolved psychological mechanisms and domain specific processes. The text also integrates behavior genetic research with evolutionary and developmental principles. In this contributed volume editors Robert L. Burgess and Kevin MacDonald have brought together a distinguished group of social and behavioral scientists employing multiple levels of analysis drawn from a variety of academic disciplines. This diverse group of contributors illustrates the enormous power of evolutionary theory by elucidating human behavior and its development and the various ways it is manifested in different environments. *Evolutionary Perspectives on Human Development* applies evolutionary theory to such topics as parent child relationships the maltreatment of children psychopathology cooperation and competition among siblings and the acquisition of vital resources in different cultural settings from an evolutionary point of view. **Key Features** Comprehensive coverage of the impact of evolutionary theory on human development provides students with the most thorough foundation available in this area. Contributions by leading scholars and researchers expose readers to the exciting research and developments that have been occurring in the field. An introductory chapter written by the volume editors provides an accessible overview of the

book *Evolutionary Perspectives on Human Development* provides state of the art groundwork in evolutionary theory as viewed by leading thinkers in the field It is an excellent supplementary textbook for advanced undergraduate and graduate courses in evolutionary and developmental psychology

Evolutionary Perspectives on Human Growth and Development Zeev Hochberg, Benjamin C. Campbell, 2021-05-07

Evolutionary Perspectives on Infancy Sybil L. Hart, David F. Bjorklund, 2022-01-01 This unique volume is one of the first of its kind to examine infancy through an evolutionary lens identifying infancy as a discrete stage during which particular types of adaptations arose as a consequence of certain environmental pressures Infancy is a crucial time period in psychological development and evolutionary psychologists are increasingly recognizing that natural selection has operated on all stages of development not just adulthood The volume addresses this crucial change in perspective by highlighting research across diverse disciplines including developmental psychology evolutionary developmental psychology anthropology sociology nutrition and primatology Chapters are grouped into four sections Theoretical Underpinnings Brain and Cognitive Development Social Emotional Development Life and Death *Evolutionary Perspectives on Infancy* sheds new light on our understanding of the human brain and the environments responsible for shaping the brain during early stages of development This book will be of interest to evolutionary psychologists and developmental psychologists biologists and anthropologists as well as scholars more broadly interested in infancy

Adaptive Origins Peter LaFrenière, 2011-01-07 In this text students are invited to rethink psychology by

grounding it in the natural sciences with the understanding that evolutionary and developmental processes work together with culture to solve problems of human adaptation These processes are cast as interdependent Development cannot be understood except in the light of evolutionary theory and the best proof of evolution is the fact of development For students of evolutionary psychology all the central topics such as evolved mental modules for theory of mind or language require an understanding of the developmental processes that lead to their expression Genes as important as they are are never the whole story The role of biological factors is explored in chapters outlining evolution development genetics human origins hormones and the brain Then the integrative value of this evolutionary developmental vision in understanding key topics in psychology is illustrated by applying it to traditional area of inquiry including infancy and attachment emotions and their expression social relations with peers cognitive and language development sex differences courtship and mating violence and aggression and cooperation and competition

Child Development in Evolutionary Perspective David F.

Bjorklund,2020-10-29 Natural selection has operated as strongly or more so on the early stages of the lifespan as on adulthood One evolved feature of human childhood is high levels of behavioral cognitive and neural plasticity permitting children to adapt to a wide range of physical and social environments Taking an evolutionary perspective on infancy and childhood provides a better understanding of contemporary human development predicting and understanding adult behavior and explaining how changes in the early development of our ancestors produced contemporary Homo sapiens

The Origins of Human Nature David F. Bjorklund,Anthony D. Pellegrini,2002 The origins of human nature offers readers the first book length attempt to define the field of evolutionary developmental psychology the application of the principle of natural selection to explain contemporary human development The authors point out that an evolutionary developmental perspective allows one to view gene environment interactions the significance of individual differences and the role of behavior and development in evolution in much greater depth The authors also focus on how an evolutionary perspective can foster a better understanding of human development and how developmental processes may have influenced the course of human evolution Of particular interest are chapters that explore factors influencing parenting and other aspects of family life the role of play and the interacting roles of an extended juvenile period a big brain and a complex social structure in human cognitive evolution The authors present a hybrid approach to evolution and development pointing out that though underlying assumptions held by evolutionary and developmental psychologists have been at odds each field has much to offer the other

Sociobiological Perspectives on Human Development Kevin B. MacDonald,2012-12-06 Examines the importance of evolutionary biology for key issues in human development Illustrates the power of socio biological approaches in understanding developmental phenomena and their importance in generating new empirically verifiable predictions

The Evolution of Personality and Individual Differences Dr. David M. Buss,Dr. Patricia H. Hawley,2010-11-24 Capturing a scientific change in thinking about personality and individual differences that has been building over the past 15 years this

volume stands at an important moment in the development of psychology as a discipline Rather than viewing individual differences as merely the raw material upon which selection operates the contributing authors provide theories and empirical evidence which suggest that personality and individual differences are central to evolved psychological mechanisms and behavioral functioning The book draws theoretical inspiration from life history theory evolutionary genetics molecular genetics developmental psychology personality psychology and evolutionary psychology while utilizing the theories of the best and the brightest international scientists working on this cutting edge paradigm shift In the first of three sections the authors analyze personality and the adaptive landscape here the authors offer a novel conceptual framework for examining personality assessment adaptations Because individuals in a social environment have momentous consequences for creating and solving adaptive problems humans have evolved difference detecting mechanisms designed to make crucial social decisions such as mate selection friend selection kin investment coalition formation and hierarchy negotiation In the second section the authors examine developmental and life history theoretical perspectives to explore the origins and development of personality over the lifespan The third section focuses on the relatively new field of evolutionary genetics and explores which of the major evolutionary forces such as balancing selection mutation co evolutionary arms races and drift are responsible for the origins of personality and individual differences Existing as a seminal work in the newly emerging evolutionary psychology field this book is a must read for anyone invested in the development of psychology as a field
