I recently noticed a question on an e-mail list devoted to teaching technical writing that went something like this: "I have to teach an ethics class for technical communications students, where do I start?" Allen and Voss have provided us with one answer to this question. It's an answer that includes not only a method for making decisions about ethical action as technical communicators, but also a comprehensive look at what kinds of considerations fall under the rubric of "ethics." While I wish that, along the way, certain elements, specifically the relation of ethics in professional practice to the rhetorical concept of ethos, were more carefully treated, this volume forms an excellent place to initiate discussion of a knotty area in technical communication. Users could be students who have not met ethics questions before, but they could also be instructors like the person posting to the list who have not yet consolidated their own views on how to make the "fit" of ethics with techniques. And they could equally be experienced professionals who need to review their ongoing choices in the "gray areas" touched on every day in technical communications practice.

The volume is laid out in three parts. The first, "Setting the Stage" (Chs. 1–3) provides an overview of ethics in business and industrial arenas, and identifies what the authors call the "key to ethical behavior" acting on the basis of personal integrity. In addition,

they define both values and ethics, and then set up a six-step model for making choices in ethically difficult situations. The section concludes by presenting the ways in which ethics are built into both the plans (charters) and expectations (codes) of professional organizations. The two following sections, "Ten Values in Technical Communication" (Chs. 4–13) and "Applying the Values: The Cases" (Chs. 14–24), cover the ten elements, or "values," that the authors identify as part and parcel of ethical behavior on the job, and a working set of nine "cases" or scenarios that invite the reader to apply the techniques outlined in the first section. The cases appear one per unit in Chapters 15–23, along with small and large group discussion prompts reflecting the case study methods detailed in Chapter 14. Chapter 24 concludes the book with an invitation to create a case of one's own. Combining this last move with the incremental presentation of definitions of ethics and codes of ethics plus the ten designated values indicates that the authors favor a mastery learning approach to ethical behavior and the overall question of the place of ethics in business.

Despite the apparent concern for the reader shown in using such deliberate sequencing, I recommend reading the volume discontinuously. First, this approach livens up the reductive pacing that results from treating ethics questions as if they were merely a matter of identifying and explain-
