Azarian, 2005-11-30 Harrison C White is one of American sociology's pre eminent thinkers yet until now his endeavour to develop a general theoretical perspective on the basis of social network analysis has remained largely unexamined This book opens out for the first time White's contribution to those interested generally in his social network approach but daunted by the complexity and mathematical modelling often employed in his published work Special attention is paid to White's model of production markets as an application of his general sociology The book draws on interview material with White himself as well as with several of his past students *General Sociology; An Exposition of the Main Development in Sociological*

Exposition of the Main Development in Sociological Theory From Spencer to Ratzenhofer Treatises always have their place but one may venture the belief that in the present stage of sociological thought there is more use for the humbler service of a conspectus There is more in common between the scattered forces of sociology than can easily be made to appear Differences of emphasis create illusions of separateness and even antagonism where there is only division of labor Disagreements about details of fact or method cover up unities in fundamental conception A distinctive social philosophy is already here and the sociologists accept it more generally than most of their number realize We need claim for it no more than that it is a point of view first about the reality in question and second about ways of inquiring into the reality This philosophy has happily as yet a very meager doctrinal content as distinguished from its literature of scope and method It is the more free to grow into a commanding scientific technique Whoever attempts to map the present outlook of sociology will of course put his own limitations on exhibit but even a rude chart of present sociology will doubtless pay for itself in helping others presently to make a better one The following outline accordingly contains the skeleton of a lecture course occupying four hours a week for an academic year and of a program of seminar work in sociological methodology continuing through

three years The outline also represents in a general way the point of view occupied by my colleagues in the Department of Sociology in the University of Chicago Of course they are in no way responsible for anything which this syllabus contains and I do not know to what extent their conclusions about details may differ from those here indicated About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

a comprehensive extended and systematic analysis of social theory as it developed between the two World Wars a period during which major transformation occurred Centering on the continuities on the one hand and discontinuities on the other in substantive theory it deals with the major ideas of Cooley Ellwood Park Thomas Ogburn Bernard Chapin Mead Faris Hankins MacIver Reuter Lundberg H P Becker Parsons Znaniecki Sorokin and Blumer Finally the problematic relevancy of the past for the present is directly confronted The author examines how basic assumptions of theory in particular periods have used relatively unique schema and generated considerable controversy **Introduction to the Social Sciences (RLE**

Social Theory) Maurice Duverger,2020-09-10 Professor Duverger at last provides the student with an overall view of the methodology of the social sciences He briefly traces the origin of the notion of a social science showing how it emerged from social philosophy Its essential elements and pre conditions are described the splintering of social science into specialist disciplines is explained and the need for a general sociology confirmed The techniques of observation used by social scientists are dealt with in some detail and the unity of the social sciences is illustrated by examples of the universal application of these techniques Documentary evidence in its various forms are described along with the basic analytical techniques including quantitative methods and content analysis Other methods of gathering information through polls interviews attitude scales and participant observation are all described Professor Duverger brings together the different kinds of analysis used to assess the information thus gathered Arguing that observing and theorizing are not two different stages or levels of research he examines the practical value and difficulties of general sociological theories partial theories and models and working hypotheses He both describes and assesses the limitations of experiment and the scope of comparative methods in the social sciences He then gives elementary instructions for using and assessing the value of mathematical techniques The possibilities of presenting social phenomena through graphs and charts are also explored There are useful book lists and diagrams **General Sociology** Albion Woodbury Small,2014-01-08 This is a reproduction of a
