Moore, Yu Zhang, 2023-09-28 Explains the value of no boundary thinking NBT in biological and biomedical research in helping to define impactful research questions *NEO 2015* Oliver Schütze, Leonardo Trujillo, Pierrick Legrand, Yazmin Maldonado, 2016-09-15 This volume comprises a selection of works presented at the Numerical and Evolutionary Optimization NEO workshop held in September 2015 in Tijuana Mexico The development of powerful search and optimization techniques is of great importance in today's world that requires researchers and practitioners to tackle a growing number of challenging real world problems In particular there are two well established and widely known fields that are commonly applied in this area i traditional numerical optimization techniques and ii comparatively recent bio inspired heuristics Both paradigms have their unique strengths and weaknesses allowing

them to solve some challenging problems while still failing in others The goal of the NEO workshop series is to bring together people from these and related fields to discuss compare and merge their complimentary perspectives in order to develop fast and reliable hybrid methods that maximize the strengths and minimize the weaknesses of the underlying paradigms Through this effort we believe that the NEO can promote the development of new techniques that are applicable to a broader class of problems Moreover NEO fosters the understanding and adequate treatment of real world problems particularly in emerging fields that affect us all such as health care smart cities big data among many others The extended papers the NEO 2015 that comprise this book make a contribution to this goal Genetic and Evolutionary Computation Conference ,2005

Symbolic Regression Gabriel Kronberger,Bogdan Burlacu,Michael Kommenda,Stephan M. Winkler,Michael Affenzeller,2024-08-16 Symbolic regression SR is one of the most powerful machine learning techniques that produces transparent models searching the space of mathematical expressions for a model that represents the relationship between the predictors and the dependent variable without the need of taking assumptions about the model structure Currently the most prevalent learning algorithms for SR are based on genetic programming GP an evolutionary algorithm inspired from the well known principles of natural selection This book is an in depth guide to GP for SR discussing its advanced techniques as well as examples of applications in science and engineering The basic idea of GP is to evolve a population of solution candidates in an iterative generational manner by repeated application of selection crossover mutation and replacement thus allowing the model structure coefficients and input variables to be searched simultaneously Given that explainability and interpretability are key elements for integrating humans into the loop of learning in AI increasing the capacity for data scientists to understand internal algorithmic processes and their resultant models has beneficial implications for the learning process as a whole This book represents a practical guide for industry professionals and students across a range of disciplines particularly data science engineering and applied mathematics Focused on state of the art SR methods and providing ready to use recipes this book is especially appealing to those working with empirical or semi analytical models in science and engineering EVOLVE - A Bridge between Probability, Set Oriented Numerics, and Evolutionary Computation V Alexandru-Adrian Tantar,Emilia Tantar,Jian-Qiao Sun,Wei Zhang,Qian Ding,Oliver Schütze,Michael Emmerich,Pierrick Legrand,Pierre Del Moral,Carlos A.
