10 0 and 10 1 Introducing Geographic Information Systems with ArcGIS integrates a broad introduction to GIS with a software specific workbook for Esri's ArcGIS. Where most courses make do using two separate texts one covering GIS and another the software this book enables students and instructors to use a single text with an integrated approach covering both in one volume with a common vocabulary and instructional style. This revised edition focuses on the latest software updates ArcGIS 10 0 and 10 1. In addition to its already successful coverage the book allows students to experience publishing maps on the Internet through new exercises and introduces the idea of programming in the language Esri has chosen for applications i.e. Python. A DVD is packaged with the book as in prior editions containing data for working out all of the exercises. This complete user friendly coursebook is updated for the latest ArcGIS releases ArcGIS 10 0 and 10 1. Introduces the central concepts of GIS and topics needed to understand spatial information analysis. Provides a considerable ability to operate important tools in ArcGIS. Demonstrates new capabilities of ArcGIS 10 0 and 10 1. Provides a basis for the advanced study of GIS and the study of the newly emerging field of GIScience. Introducing Geographic Information Systems with ArcGIS Third Edition is the ideal guide for undergraduate students taking courses such as Introduction to GIS Fundamentals of GIS and Introduction to ArcGIS Desktop. It is also an important guide for professionals looking to update their skills for ArcGIS 10 0 and 10 1.

Introduction to Geographic Information Systems with ArcView GIS Exercises  
 Kang-Tsung Chang, 2001-09. Designed for a comprehensive coverage of GIS topics this book is organized into three parts. Part 1 chapters 1 to 8 covers the fundamentals of GIS including coordinate systems data models data input data management and data display. Part 2 chapters 9 to 12 includes data exploration analysis using vector and raster data and terrain analysis. Part 3 chapters 13 to 16 covers spatial interpolation GIS modeling regions and network and dynamic segmentation. Also included in the book are new developments in GIS such as the object oriented model and research oriented questions such as the effect of spatial scale. This book stresses both concepts and practice. GIS concepts from fields such as geography cartography spatial analysis and database management explain the purpose and objectives of GIS operations and the interrelationship among GIS operations. A basic understanding of map projection for example explains why we must project map layers to be used together to a common coordinate system and why we need to input numerous projection parameters. Each chapter in this book is divided into two main sections. The first section covers topics and concepts addressed in the chapter. The second section covers applications usually with three to five problem solving tasks. To include data sets and instructions for the practice sections we chose GIS packages as examples for this book and ArcView software is included complimentary with this textbook.
