## **Genetic Engineering Science And Ethics On The New Frontier:**

**Genetic Engineering** Michael Boylan, Kevin E. Brown, 2001 A philosopher and a biologist offer a textbook to be used alone or with other texts in an ethical theory course that focuses on issues raised by genetic engineering Students are expected to have at least some familiarity with both biology and philosophy *Gaia Connections* Alan S. Miller, 2003 *Gaia Connections* addresses several arenas of concern as humankind faces an escalating ecological and moral crisis in this new millennium Beginning with an overview of the history of philosophy and the importance of traditional thinking on modern day ethical reflection the book then looks at the development of theories of justice the problems of equity in global human relations the inability of existing economic systems to resolve our human and environmental dilemmas the unnatural connections now obtaining between genuine human need and the technological drift of science the new genetics and reproductive technologies and the nature of modern war The study concludes with some historical perspectives on American environmental history and the urgent need for change in our ecoethical social and value systems The principal focal areas of the original edition are continued the actual state of the global environment today the imperative for the development of sustainable economic and resource systems the movement within much of science toward an almost universal biological determinism and the need for a reaffirmation of an ethical value system which places the needs of people before the needs of property and profits The revised edition not only updates these data and the concerns of the original book but also visits a number of new issues the movement for environmental justice the connections between global poverty and the now almost universal allegiance to a new world market and free trade system the progress and the dilemmas of molecular biology and genetic engineering and the growing disarray within the global systems of political economy *The Bioethics of Space Exploration* Konrad Szocik, 2023 *The Bioethics of Space Exploration* provides a comprehensive discussion of the possible bioethical issues and challenges that may arise when considering future long term space missions Because of numerous threats within the space environment many consider the concept of radically modifying humans to be a serious and perhaps even necessary option Konrad Szocik presents what types of ethical and bioethical challenges may await participants on commercial scientific and colonizing missions and provides a new perspective into the potential for radical biomedical technologies **Scientific Freedom** Simona Giordano, John Coggon, Marco Cappato, 2012-09-13 This book is available as open access through the Bloomsbury Open Access programme and is available on [www.bloomsburycollections.com](http://www.bloomsburycollections.com) *Scientific Freedom* is the first comprehensive collection covering both the state of scientific progress and the ethics law and history of scientific research The book gives readers a fascinating range of perspectives on matters of scientific research that directly affect all of us Examining the ethical legal social economic and political issues surrounding freedom of scientific research the book evaluates ways in which national and international policies can impact upon individuals access to potentially life saving treatment cures and technologies and can therefore affect human life and death With contributions from Nobel Laureates

representatives of patients associations scientists scholars and politicians this book provides a concise and comprehensive view of the limitations and dangers facing the future of innovation and scientific progress Human Rights and Disability

John-Stewart Gordon, Johann-Christian Pöder, Holger Burckhart, 2017-07-14 The formerly established medically based idea of disability with its charity based approach to treatment and services is being replaced by a human rights based approach in which people with impairments are no longer considered medical problems totally dependent on the beneficence of non impaired people in society but have fundamental rights to support inclusion and participation This interdisciplinary book examines the diverse concerns that people with impairments face in the context of human rights provides insights into new developments on important issues relating human rights to disability and features new approaches and solutions to vital problems in the current debate
