Bertics, 2008-02-05 A comprehensive collection of optimized methods for dissecting the mechanisms that control epidermal growth factors EGF and their regulators in both normal and pathological states These readily reproducible techniques range from the study of purified EGF receptor to complex signaling and processing networks in intact cells including a chapter on the clinical and pharmacological considerations of their use in cancer therapy The protocols follow the successful Methods in Molecular Biology™ series format each offering step by step laboratory instructions an introduction outlining the principles behind the technique lists of the necessary equipment and reagents and tips on troubleshooting and avoiding known pitfalls **New and Emerging Proteomic Techniques** Dobrin Nedelkov, Randall W. Nelson, 2008-02-04 Leading researchers and innovators describe in step by step detail the latest techniques that promise to significantly impact the practice of proteomics as well as its success in developing novel clinical agents The methods span the entire spectrum of top down and bottom up approaches including microarrays gels chromatography and affinity separations and address every aspect of the human proteome both quantitatively and qualitatively The techniques of protein detection utilized are diverse and range from fluorescence and resonance light scattering to surface plasmon resonance and mass spectrometry The protocols follow the successful Methods in Molecular Biology™ series format each offering step by step laboratory instructions an introduction outlining the principles behind the technique lists of the necessary equipment and reagents and tips on troubleshooting and avoiding known pitfalls **Cell Imaging Techniques** Douglas J. Taatjes, Brooke T. Mossman, 2008-02-04 A diverse collection of state of the art methods for the microscopic imaging of cells and molecules The authors cover a wide spectrum of complimentary techniques including such methods as fluorescence microscopy electron microscopy atomic force microscopy and laser scanning cytometry Additional readily reproducible protocols on confocal scanning laser microscopy quantitative computer assisted image analysis laser capture microdissection microarray image scanning near field scanning optical microscopy and reflection contrast microscopy round out this eclectic collection of cutting edge imaging techniques now available The authors also discuss preparative methods for particles and cells by transmission electron microscopy Epidermal Growth Factor Tarun B. Patel, Paul J. Bertics, 2005-12-15 A comprehensive collection of optimized methods for dissecting the mechanisms that control epidermal growth factors EGF and their regulators in both normal and pathological states These readily reproducible techniques range from the study of purified EGF receptor to complex signaling and processing networks in intact cells including a chapter on the clinical and pharmacological considerations of their use in cancer therapy The protocols follow the successful Methods in Molecular Biology™ series format each offering step by step laboratory instructions an introduction outlining the principles behind the technique lists of the necessary equipment and reagents and tips on troubleshooting and avoiding known pitfalls **Hormone Assays in Biological Fluids** Michael J. Wheeler, William D. Fraser, J. S. Morley

Hutchinson,2008-02-04 Expert researchers who have developed and applied significant new assays describe in step by step detail a variety of methods for measuring a broad variety of hormones related peptides and synthetic steroids in various biological fluids The hormones measured range from glucocorticoids in biological fluids urinary steroids aldosterone in blood and plasma renin activity to gut hormones in plasma melatonin prolactin 6 sulfatoxymelatonin and androgens in blood saliva and hair The emphasis is on noncommercial assays so that investigators can set up novel methods suited to their special needs Commercial assays are also described for comparative purposes Tutorials on radioimmunoassay gas chromatography mass spectrometry high performance liquid chromatography and PCR techniques help the reader to choose the best method for his or her purpose

Protein Design Raphael Guerois,Manuela López de la Paz,2008-02-04 Proteins have evolved through selective pressure to accomplish specific functions The functional properties of proteins depend upon their three dimensional structures which result from particular amino acid sequences folding into tightly packed domains Thus to understand and modulate protein function rationally one definitely needs methods and algorithms to predict and decipher how amino acid sequences shape three dimensional structures Protein design aims precisely at providing the tools to achieve this goal The predictive power of rational protein design methods has dramatically increased over the past five years A broad range of studies now illustrate how the sequence of proteins and peptides can be tuned to engineer biological tools with intended properties

1 3 The extensive characterization of peptides and protein mutants has enormously benefited the understanding of protein sequence to structure relationships Synergies between computational and experimental approaches have also added momentum to the advancing limits of design methods The potential applications in fundamental biochemistry and in biotechnology justify the considerable excitement that this progress has generated within the research community The field is probably mature enough so that expert knowledge can assist researchers of diverse disciplines to rationally create or modify their favorite protein Thus the aim of *Protein Design Methods and Protocols* is to account for the most up to date protein design and engineering strategies so that readers can undertake their own projects with maximum confidence in a successful return The basic concepts underlying rational design of proteins are intimately related to their three dimensional structures

Clinical Applications of PCR Y. M. Dennis Lo,2008-02-04 In this updated second edition leading researchers apply molecular diagnostics to the many recent advances that have occurred in polymerase chain reaction PCR based technologies Highlights include real time PCR which allows the technique to be performed in a quantitative manner with improved sensitivity robustness and resilience to carryover contamination mass spectrometric analysis of nucleic acids and circulating cell free nucleic acids in plasma The authors apply these innovations to a broad spectrum of applications including gene expression methylation trace molecule gene dosage and single cell analysis

Anticancer Research ,2009 *Protein NMR Techniques*
A. Kristina Downing,2008-02-03 When I was asked to edit the second edition of Protein NMR Techniques my first thought was that the time was ripe for a new edition The past several years have seen a surge in the development of novel methods that are truly revolutionizing our ability to characterize biological macromolecules in terms of speed accuracy and size limitations I was particularly excited at the prospect of making these techniques accessible to all NMR labs and for the opportunity to ask the experts to divulge their hints and tips and to write practically about the methods I commissioned 19 chapters with wide scope for Protein NMR Techniques and the volume has been organized with numerous themes in mind Chapters 1 and 2 deal with recombinant protein expression using two organisms E coli and P pastoris that can produce high yields of isotopically labeled protein at a reasonable cost Staying with the idea of isotopic labeling Chapter 3 describes methods for perdeuteration and site specific protonation and is the first of several chapters in the book that is relevant to studies of higher molecular weight systems A different but equally powerful method that uses molecular biology to edit the spectrum of a large molecule using segmental labeling is presented in Chapter 4 Having successfully produced a high molecular weight target for study the next logical step is data acquisition Hence the final chapter on this theme Chapter 5 describes TROSY methods for structural studies
