Epithelial-Mesenchymal Transition (EMT) as a Therapeutic Target in Cancer Tao Sun, Guojun Sheng, Weilong Zhong, Dingzhi Huang, 2023-03-03

Epigenetics in Precision Medicine Jose Luis Garcia-Gimenez, 2021-11-12 In recent years knowledge of epigenetic mechanisms underlying disease onset and progression has proven crucial for the development of novel early diagnosis and prognosis biomarkers for patient stratification and precision medicine *Epigenetics in Precision Medicine* a new volume in the Translational Epigenetics series provides a thorough discussion and overview of current developments in clinical epigenetics with special emphasis on epigenetic biomarkers that can be used for clinical diagnosis prognosis patient stratification and treatment monitoring Disease types discussed include cancer metabolic disorders neurodegenerative diseases bone disease and immune related disorders The book examines the challenges of advancing epigenetics research and translating findings to the clinic and drug discovery in each of these areas as well as current solutions chapter authors discuss how to leverage epigenomic technologies applications and tools such as next generation sequencing to discover new epigenetic biomarkers in disease and drug studies *Epigenetics in Precision Medicine* focuses on complex epigenetic mechanisms in several pathologies and explores how epigenetics can power the advance of precision medicine not only by improving in vitro diagnostic and prognostic tools but by providing new therapeutic approaches to treat human disease Provides a thorough grounding in epigenetics driven precision medicine with emphasis on developing and implementing early diagnosis and prognosis biomarkers and supporting patient stratification Empowers researchers and clinicians to incorporate epigenetics in new disease research drug discovery and clinical practice Features chapter contributions from international leaders in the field

[Links between Fibrogenesis and Cancer](#) Esteban C. Gabazza, 2019-11-18 Tissue fibrosis may occur for unknown causes or be the consequence of many pathological conditions including chronic inflammatory or infectious diseases autoimmune disorders graft rejection or malignancy On the other hand malignant tumors have been identified in fibrotic tissues decades ago and now accumulating evidence suggests that fibrotic lesions enhance the risk of cancer in several organs such as liver lungs and breast Disruption of an organ parenchymal cells and of its normal structural scaffold during tissue fibrogenesis appears to induce loss of cell polarity promoting uncontrolled cell proliferation that may eventually lead to cancer development Many cellular and molecular abnormalities including aberrant expression of microRNAs genetic and epigenetic alterations evasion or delayed apoptosis unregulated intracellular signal pathways and dysregulation or defective intercellular communications have been proposed to explain this link between fibrogenesis and carcinogenesis However the precise mechanisms of this fibrosis to cancer transition remain unclear This book presents a collection of reviews and original articles summarizing recent advances in understanding the molecular mechanisms of cancer development in fibrotic organs

[Epigenetic Cancer Therapy](#) Steven Gray, 2023-05-03 *Epigenetic Cancer Therapy* Second Edition provides a comprehensive discussion of healthy and aberrant epigenetic biology along with

new discoveries to improve our understanding of cancer epigenetics and therapeutics The book encompasses large scale intergovernmental initiatives as well as recent findings across cancer stem cells rational drug design clinical trials and chemopreventative strategies As a whole the work articulates and raises the profile of epigenetics as a therapeutic option in the future management of cancer Since the publication of the first edition of this book the field of epigenetics has undergone significant change New epigenetic therapies have been designed and approved for clinical use Our knowledge of the plasticity of the epigenome in cancer and disease has expanded dramatically with increasing evidence linking pollution to epigenetic changes in cancer development This second edition has been fully updated to address these changes along with promising therapeutic programs such as CRISPR Cas9 mediated approaches CAR T based therapies epigenetic priming histone modifications and similar transformative advances across synthetic biology and cellular engineering Concisely summarizes the therapeutic implications of recent large scale epigenome studies Covers new findings in the interplay between cancer stem cells CSCs and drug resistance thus demonstrating that epigenetic machinery is a candidate target for the eradication of these CSCs Provides a fully updated resource on new topics including the epitranscriptome oncohistones single cell analysis epigenetic priming CRISPR therapy CAR T therapy and epigenetics and pollution Features chapter contributions from leading experts in the field

lncRNAs in Cancer Metastasis and Therapy Resistance Aamir Ahmad, Palmiro Poltronieri, Shahab Uddin, 2023-10-30 lncRNAs long non coding RNAs are the relatively longer more than 200 nucleotides long subtypes of ncRNAs non coding RNAs i e the RNAs that do not code for any proteins However even without themselves being translated lncRNAs impact the cellular gene expressions and functions in ways that are just beginning to be explored The metastasis of human cancers as well as acquired resistance against the administered therapeutics are two major factors responsible for the cancer associated mortality

MicroRNA in Human Malignancies Massimo Negrini, George A. Calin, Carlo M. Croce, 2022-02-18 MicroRNA in Human Malignancies offers a deep overview of the role and translational significance of miRNAs in the development of cancer and other malignancies The book establishes the foundations of the field by covering essential mechanisms and the translational potential of miRNAs in the field of oncology Specific topics covered include invasion and metastasis miRNAs and metabolism and opportunities of miRNAs in therapeutics Chapters on diseases include content on disease related pathophysiology as well as diagnostic prognostic and predictive value This book is an essential reference for students entering the field as well as researchers and investigators Provides fundamental and translational chapters that facilitate the acquisition of knowledge needed to design and perform innovative miRNA related research studies Synthesizes current research with a critical review on the field Offers in depth research by leading experts in the field

GLUT3 Is Induced During Epithelial-Mesenchymal Transition and Promotes Tumor Cell Proliferation in Non-small Cell Lung Cancer Mangalore Mangalore Press, 2015-12-15 This open access article by various authors presents key research on GLUT3 is induced during epithelial mesenchymal transition and promotes tumor cell proliferation in non small

cell lung cancer Alterations in glucose metabolism and epithelial mesenchymal transition EMT constitute two important characteristics of carcinoma progression toward invasive cancer Despite an extensive characterization of each of them separately the links between EMT and glucose metabolism of tumor cells remain elusive Here we show that the neuronal glucose transporter GLUT3 contributes to glucose uptake and proliferation of lung tumor cells that have undergone an EMT
