Effortless attention and action have been documented across a range of normal activities ranging from rock climbing to chess playing and yet fundamental questions about the cognitive science of effortlessness have gone largely unasked. This book draws from the disciplines of cognitive psychology, neurophysiology, behavioral psychology, genetics, philosophy and cross cultural studies. Starting from the premise that the phenomena of effortless attention and action provide an opportunity to test current models of attention and action, leading researchers from around the world examine topics including effort as a cognitive resource, the role of effort in decision making, the neurophysiology of effortless attention and action, the role of automaticity in effortless action, expert performance in effortless action and the neurophysiology and benefits of attentional training.
