Artificial Intelligence and Precision Oncology Zodwa Dlamini, 2023-01-21 This book highlights the use of artificial intelligence AI big data and precision oncology for medical decision making in cancer screening diagnosis prognosis and

treatment Precision oncology has long been thought of as ideal for the management and treatment of cancer This strategy promises to revolutionize the treatment control and prevention of cancer by tailoring tests treatments and predictions to specific individuals or population groups In order to accomplish these goals vast amounts of patient or population group specific data needs to be integrated and analysed to be able to identify key patterns or features which can be used to define or characterize the disease or the response to the disease in these individuals These patterns or features can be as varied as molecular patterns or features in medical images This level of data analysis and integration can only be achieved through the use of AI The book is divided into three parts starting with a section on the use of artificial intelligence for screening diagnosis and monitoring in precision oncology The second part Artificial intelligence and Omics in precision oncology highlights the use of AI and epigenetics metabolomics microbiomics in precision oncology The third part covers artificial intelligence in cancer therapy and its clinical applications It also highlights the use of AI tools for risk prediction early detection diagnosis and accurate prognosis This book written by experts in the field from academia and industry will appeal to cancer researchers clinical oncologists pathologists medical students academic teaching staff and medical residents interested in cancer research as well as those specialising as clinical oncologists

Farmer,John M. Walker,2012-12-06 This book aims to describe the current state of knowledge and possible future developments in a number of major areas of research into the nature causes and treatment of cancer The contributing authors have been encouraged to discuss their subjects at the molecular level It will become apparent to the reader that considerable developments in the understanding of the fundamental nature of cancer in molecular terms are constantly being made This is particularly the case in the area of oncogene research where differences between tumour and normal cells can now be defined in terms of altered expression of DNA sequences An understanding of the methods available for detecting cancer of the process of carcinogenesis and of the means available for treating cancer can only be achieved with a precise knowledge of the basic biochemical and molecular processes involved Since it is all too easy for the research scientist to become totally absorbed within the specialised area of research in which he is involved the first chapter is an attempt to encourage a broader field of vision by introducing the clinician s view of the cancer problem which illustrates the broad

spectrum of basic problems that need to be solved by the cancer researcher *The Genetic Basis of Human Cancer* ,1998
