*Know Everything about Skin Cancer* Dr Levi Don,2020-10-09 Skin cancer is the out of control growth of abnormal cells in the epidermis the outermost skin layer caused by unrepaired DNA damage that triggers mutations These mutations lead the skin cells to multiply rapidly and form malignant tumors The main types of skin cancer are basal cell carcinoma BCC squamous cell carcinoma SCC melanoma and Merkel cell carcinoma MCC

The two main causes of skin cancer are the sun's harmful ultraviolet UV rays and the use of UV tanning machines. The good news is that if skin cancer is caught early, your dermatologist can treat it with little or no scarring and high odds of eliminating it entirely. Often the doctor may even detect the growth at a precancerous stage before it has become a full-blown skin cancer or penetrated below the surface of the skin. This book will expose you to the various methods to treat skin cancer, including home remedies and foods.
