Human Robots in Myth and science John Cohen, 2025-05-30 First published in 1966 in *Human Robots in Myth and Science* the author traces the idea of the robot from antiquity until the present day 1960s and sketches the lines of its likely development in the future Modern science like science fiction is deeply concerned with the idea of a robot or self regulating artifact which operates without human aid Ultra rapid computers pilotless planes and automated factories straight away come to mind but there are numberless other automatic devices As John Cohen probes this exciting theme it becomes increasingly clear that the notion of a robot has had far reaching repercussions in the history of science philosophy and literature and in the growth of industry In his analysis of the motives of robot makers throughout the ages the author distinguishes the impulse which challenges the gods themselves from the merely utilitarian urge There is a vast difference between the age old quest for technical skill and the desire to wrest from the gods the secret of making a man The topic is treated historically beginning with Biblical Egyptian Greek and other antique robots and their significance and followed by a description of the man made men of medieval science alchemy and fiction The theory of robots come into its own in the seventeenth century and its application in craftsmanship in industry in the eighteenth century It is only in the recent past however that the world of robots has begun to flourish in an ever growing scale In the age of AI this historical reference work is a must read for scholars and researchers of history philosophy and literature

Essays from the Edge of Science

Kenneth W. Behrendt, 2015-04-29 *Essays from the Edge of Science* is author and researcher Kenneth W Behrendts latest contribution to the literature of the New Age It is an exciting and insightful analysis of various topics that takes the reader from the depths of our planets oceans to the farthest reaches of cosmic space and time while outlining what will most likely be accepted science by the end of this century Youll learn about the astonishing telepathic powers of the so called lower animals An entire chapter is devoted to the living subterrestrial creatures that inhabit the Earths crust and whose highly evolved paranormal powers are responsible for many of the events taking place in haunted houses The soon coming elimination of fossil fuels and their replacement by free energy devices that use the power of permanent magnets is discussed Even the nature of time as well as a means to travel through it is explored as the reader is taken on an imaginary ride aboard what could be the first truly functional time machine In a highly controversial chapter the author finally gives the real reason that our planets major governments dare not reveal what they know about the UFO phenomenon All this however is only a small sample of what awaits one in this incredible work This book is sure to fascinate the general reader who has always suspected that what we have been taught is real is in fact only a very small portion of a much larger and stranger reality Now that rarely seen hidden reality is exposed so that it can finally be a subject for serious scientific inquiry

An Anthropology of Robots and AI Kathleen Richardson, 2015-02-11 This book explores the making of robots in labs at the Massachusetts Institute of Technology MIT It examines the cultural ideas that go into the making of robots and the role of

fiction in co constructing the technological practices of the robotic scientists The book engages with debates in anthropological theorizing regarding the way that robots are reimagined as intelligent autonomous and social and weaved into lived social realities Richardson charts the move away from the worker robot of the 1920s to the social one of the 2000s as robots are reimagined as companions friends and therapeutic agents
