Science John Michels (Journalist), 2004 A weekly record of scientific progress **Molecular Methods in Developmental Biology** Matt Guille, 2008-02-03 The process whereby a single cell the fertilized egg develops into an adult has fascinated for centuries Great progress in understanding that process has ever been made in the last two decades when the techniques of molecular biology have become available to developmental biologists By applying these techniques the exact nature of many of the interactions responsible for forming the body pattern are now being revealed in detail Such studies are a large and it seems ever expanding part of most life science groups It is at newcomers to this field that this book is primarily aimed A number of different plants and animals serve as common model organisms for developmental studies In **Molecular Methods in Developmental Biology** *Xenopus* and Zebrafish a range of the molecular methods applicable to two of these organisms are described these are the South African clawed frog *Xenopus laevis* and the zebrafish *Brachydanio rerio* The embryos of both of these species develop rapidly and externally making them particularly suited to investigations of early vertebrate development However both *Xenopus* and zebrafish have their own advantages and disadvantages *Xenopus* have large robust embryos that can be manipulated surgically with ease but their pseudotetraploidy and long generation time make them unsuitable candidates for genetics This disadvantage may soon be overcome by using the diploid *Xenopus tropicalis* and early experiments are already underway The transparent embryos of zebrafish render them well suited for in situ hybridization and immunohistochemistry and good for observing mutations in genetic screens **Nature** Sir Norman Lockyer, 2007 **New Scientist and Science Journal**, 2004 *The Zebrafish: Cellular and Developmental Biology, Part B*, 2011-04-29 This volume of *Methods in Cell Biology* the second of two parts on the subject of zebrafish provides a comprehensive compendium of laboratory protocols and reviews covering all the new methods developed since 1999 **The Zebrafish: Cellular and Developmental Biology**, 2010-12-23 This volume of *Methods in Cell Biology* the first of 3 parts on the subject of zebrafish provides a comprehensive compendium of laboratory protocols and reviews covering all the new methods developed since 2004 This first volume provides state of the art descriptions of novel cellular imaging technologies and methods for culture of zebrafish stem cells summarizes protocols for analyzing the development of major organ systems including the central nervous system CNS and introduces the use of the zebrafish as a model system for human diseases Details state of the art zebrafish protocols delineating critical steps in the procedures as well as potential pitfalls Summarizes the Zebrafish Genome Project **The Zebrafish: Cellular and Developmental Biology, Part A**, 2010-12-09 This volume of *Methods in Cell Biology* the first of 3 parts on the subject of zebrafish provides a comprehensive compendium of laboratory protocols and reviews covering all the new methods developed since 2004 This first volume provides state of the art
