Essentials of Carbohydrate Chemistry John F. Robyt, 2012-12-06 Carbohydrates are the most widely distributed naturally occurring organic compounds on Earth They make up much of our food clothing and shelter and are as vital to national economies as they are to our diet This book is the first broad treatment of carbohydrate chemistry in many years and presents the structures reactions modifications and properties of carbohydrates Woven throughout the text are discussions of biological properties of carbohydrates their industrial applications and the history of the field of carbohydrate chemistry Written for students as well as practicing scientists this text reference will be of interest to a wide range of disciplines influenced by carbohydrates biochemistry chemistry food and nutrition microbiology pharmacology and medicine *Food Carbohydrates* Steve W. Cui, 2005-05-23 Unique in its broad range of coverage *Food Carbohydrates Chemistry Physical Properties and Applications* is a comprehensive single source reference on the science of food carbohydrates This text goes beyond explaining the basics of food carbohydrates by emphasizing principles and techniques and their practical application in quality control pr **Science and Technology of Concrete Admixtures** Pierre-Claude Aïtcin, Robert J Flatt, 2015-11-12 *Science and Technology of Concrete Admixtures* presents admixtures from both a theoretical and practical point of view The authors emphasize key concepts that can be used to better understand the working mechanisms of these products by presenting a concise overview on the fundamental behavior of Portland cement and hydraulic binders as well as their chemical admixtures also discussing recent effects in concrete in terms of rheology mechanics durability and sustainability but never forgetting the fundamental role played by the water binder ratio and proper curing in concrete technology Part One presents basic knowledge on Portland cement and concrete while Part Two deals with the chemical and physical background needed to better understand what admixtures are chemically and through which mechanism they modify the properties of the fresh and hardened concrete Subsequent sections present discussions on admixtures technology and two particular types of concrete self consolidating and ultra high strength concretes with final remarks on their future Combines the knowledge of two leading authors to present both the scientific and technology of admixtures Explains what admixtures are from a chemical point of view and illustrates by which mechanisms they modify the properties of fresh and hardened concrete Presents a fundamental practical and innovative reference book on the topic Contains three detailed appendices that can be used to learn how to use admixtures more efficiently *Protein Purification* Robert K. Scopes, 2013-06-29 New textbooks at all levels of chemistry appear with great regularity Some fields such as basic biochemistry organic reaction mechanisms and chemical thermodynamics are well represented by many excellent texts and new or revised editions are published sufficiently often to keep up with progress in research However some areas of chemistry especially many of those taught at the graduate level suffer from a real lack of up to date textbooks The most serious needs occur in fields that are rapidly changing Textbooks in these subjects usually have to be written by scientists actually involved in the research that is

advancing the field It is not often easy to persuade such individuals to set time aside to help spread the knowledge they have accumulated Our goal in this series is to pinpoint areas of chemistry where recent progress has outpaced what is covered in any available textbooks and then seek out and persuade experts in these fields to produce relatively concise but instructive introductions to their fields These should serve the needs of one semester or one quarter graduate courses in chemistry and biochemistry In some cases the availability of texts in active research areas should help stimulate the creation of new courses
