*Ecodesign for Cities and Suburbs* Jonathan Barnett, Larry Beasley, 2015-06-23 As world population grows and more people move to cities and suburbs they place greater stress on the operating system of our whole planet But urbanization and increasing densities also present our best opportunity for improving sustainability by transforming urban development into desirable lower carbon compact and walkable communities and business centers Jonathan Barnett and Larry Beasley seek to demonstrate that a sustainable built and natural environment can be achieved through ecodesign which integrates the practice of planning and urban design with environmental conservation through normal business practices and the kinds of capital programs and regulations already in use in most communities Ecodesign helps adapt the design of our built environment to both a changing climate and a rapidly growing world creating more desirable places in the process In six comprehensively illustrated chapters the authors explain ecodesign concepts including the importance of preserving and restoring natural systems while also adapting to climate change minimizing congestion on highways and at airports by making development more compact and by making it easier to walk cycle and take trains and mass transit crafting and managing regulations to insure better placemaking and fulfill consumer preferences while incentivizing preferred practices creating an inviting and environmentally responsible public realm from parks to streets to forgotten spaces and finally how to implement these ecodesign concepts Throughout the book the ecodesign framework is demonstrated by innovative practices that are already underway or have been accomplished in many cities and suburbs from Hammarby Sjöstad in Stockholm to False Creek North in Vancouver to Battery Park City in Manhattan as well as many smaller scale examples that can be adopted in any community Ecodesign thinking is relevant to anyone who has a part in shaping or influencing the future of cities and suburbs designers public officials and politicians

**Suburbia in the 21st Century** Paul Maginn, Katrin B.

Anacker,2022-03-24 The majority of the world's population now live in urban areas and the 21st century has been declared as the urban age. However, closer inspection of where people live in cities especially within so-called advanced liberal democracies such as Australia, the United Kingdom and the United States reveals that most people live in different types of suburban environments. Drawing together scholars from across the globe, this book provides a series of national, regional and local case studies from Australia, Canada, Finland, France, Ireland, Spain, the United Kingdom and the United States to exemplify the diverse and dynamic nature and importance of suburbia in 21st-century urban studies, city building and urbanism. This book explores the evolving social, physical and economic character of the suburbs and how structural processes, market dynamics and government policies have shaped and transformed suburbia around the world. It highlights the continuing importance of the suburbs and the suburban dream which lives on, albeit under increasing challenges such as the global financial crisis, structural racism and the Covid-19 pandemic which have given rise to various suburban nightmares.

**Better By Design?** Paul L. Knox,2020-10-09 The design professions architecture, city planning, landscape architecture and urban design share a great deal in terms of intellectual antecedents, professional ideals and praxis. In particular, they share a commitment to creating better cities, whether at the scale of buildings, neighborhoods or city regions. But who decides what constitutes a good city and how should such an ideal be implemented? In *Better by Design*, Paul Knox explores the intellectual roots of the design professions, showing how architects, planners and other designers have traditionally interpreted their roles and implemented their ideas in cities across North America and the UK. Drawing on his long record of research and award-winning publications on the social production of the built environment, Knox offers a critical appraisal of their ultimate effectiveness in achieving the goal of creating and sustaining good cities.

**Sustainable Communities** Sim Van der Ryn, Peter Calthorpe,1986 *Cities in Global Transition* Raymond Charles Rauscher, Salim Momtaz,2016-10-05 This book examines the planning of cities in global transition, looking at Australia's Greater Sydney as a case example. The focus is on metropolitan districts, groups of municipalities within the Greater Sydney region. The subjects of global transition and sustainable urban planning (SUP) are introduced in Chapter 1. How Greater Sydney approaches planning of its region and its districts is then outlined in Chapter 2. In this chapter, three case study districts are selected for critiquing planning in the face of population and new development changes. The districts beyond the City of Sydney are Sydney Inner West, Greater Parramatta and St George. The book further outlines a methodology to assess planning practices within each of the municipalities, twelve case study municipalities in all within the three districts. Included here are State planning principles applying to Greater Sydney, with key principals selected to apply to the case study municipalities and to each district as a unit.
