Ecofriendly Pest Management For Food Security:

Ecofriendly Pest Management for Food Security Omkar Ph.D., 2016-02-03 Ecofriendly Pest Management for Food Security explores the broad range of opportunity and challenges afforded by Integrated Pest Management systems. The book focuses on the insect resistance that has developed as a result of pest control chemicals and how new methods of environmentally complementary pest control can be used to suppress harmful organisms while protecting the soil, plants and air around them. As the world's population continues its rapid increase, this book addresses the production of cereals, vegetables, fruits and other foods and their subsequent demand increase. Traditional means of food crop production face proven limitations and increasing research is turning to alternative means of crop growth and protection. Addresses environmentally focused pest control with specific attention to its role in food security and sustainability. Includes a range of pest management methods from natural enemies to biomolecules. Written by experts with extensive real world experience.

Microbes for Sustainable Insect Pest Management Md. Aslam Khan, Wasim Ahmad, 2021-04-12 The search for new strategies of pest control with safer molecules is currently of great importance and interest. Microbe mediated biological crop protection is an attractive and promising technology with no concern for a negative impact on the environment and biodiversity. Microbial hydrolytic enzymes such as proteases, chitinases, lipases etc are attractive for this purpose. They present toxic properties and act synergistically to control pest attacks. Also some metabolites that microorganisms produce for their survival or defense can be explored and exploited for plant protection. The focus of this Volume is on the potential of microbial hydrolytic enzymes and their metabolites in agroecosystem functioning. Subsequent chapters review topics such as microbial hydrolytic enzymes as powerful management tools, chitinases in IPM of agro horticultural crops, metabolites as pesticides and the importance of the metabolites of entomopathogenic fungi, metabolites and virulence factors. Other topics include microbial based nanoparticles, recombinant DNA technologies to improve the efficacy of microbial insecticides, the effects of entomopathogens on insect predators and parasitoids and the management of major vegetable insect pests. This Volume provides detailed accounts on the safe use of microbial products for sustainable management of insect pests. Its aim is to build solid foundations for the students, teachers and researchers interested in eco friendly management of important insect crop pests.
