Ecological Engineering For Pest Management Advances In Habitat Manipulation For Arthropods:

Ecological Engineering for Pest Management Geoff M Gurr, Steve D Wratten, Miguel A Altieri, 2004-08-03 Ecological engineering is about manipulating farm habitats making them less favourable for pests and more attractive to beneficial insects Though they have received far less research attention and funding ecological approaches may be safer and more sustainable than their controversial cousin genetic engineering This book brings together contributions from international workers leading the fast moving field of habitat manipulation reviewing the field and paving the way towards the development and application of new pest management approaches Chapters explore the frontiers of ecological engineering methods including molecular approaches high tech marking and remote sensing They also review the theoretical aspects of this field and how ecological engineering may interact with genetic engineering The technologies presented offer opportunities to reduce crop losses to insects while reducing the use of pesticides and providing potentially valuable habitat for wildlife conservation With contributions from the USA UK Germany Switzerland Australia New Zealand Kenya and Israel this book provides comprehensive coverage of international progress towards sustainable pest management Ecological Engineering for Pest Management Steve D. Mason, 2021-10 Biological Control Global Impacts Challenges and Future Directions of Pest Management provides a historical summary of organisms and main strategies used in biological control as well as the key challenges confronting biological control in the 21st century Biological control has been implemented for millennia initially practised by growers

moving beneficial species from one local area to another Today biological control has evolved into a formal science that provides ecosystem services to protect the environment and the resources used by humanity With contributions from dedicated scientists and practitioners from around the world this comprehensive book highlights important successes failures and challenges in biological control efforts It advocates that biological control must be viewed as a global endeavour and provides suggestions to move practices forward in a changing world Biological Control is an invaluable resource for conservation specialists pest management practitioners and those who research invasive species as well as students studying pest management science **Planthoppers** Kong Luen Heong, B. Cheng, Monina M. Escalada, 2014-10-23 The book discusses planthopper pests of rice These insects are one of the most destructive pests threatening food security around the world The historical development of the rice planthopper problem shows that they are secondary pests and single discipline control tactics or strategies were not able to manage them and instead caused frequent resurgences This book not only presents new approaches to this persistent problem but also new ecological methods new perspectives on the effect of pesticide marketing insights into developing resistant varieties and structural reforms in pest management Integrating biological ecological economic and sociological aspects it clearly presents the latest information on newly developed strategies for managing this pest Dr K L Heong is the principal scientist and insect ecologist at the International Rice Research Institute Philippines He has been researching rice planthoppers for more than 30 years Dr Heong is a fellow of the Third World Academy of Science and the Academy of Sciences Malaysia Professor Jia an Cheng is an insect ecologist who has been studying rice planthoppers for about 50 years He is a professor at Zhejiang University China Professor M M Escalada works at Visayas State University *Australian Journal of Agricultural Research*
