Ecological Modeling For Resource Management:

Ecological Modeling for Resource Management Virginia H. Dale, 2003 This book was developed from a workshop on the Effective Use of Ecological Modeling in Management held in Oak Ridge Tennessee on October 23-26 2000 The workshop was sponsored by the Department of Defense's DoD's Strategic Environmental Research and Development Program SERDP the Army Research Office and the Engineering Research and Development Center of the Corps of Engineers as well as by the U S Department of Agriculture USDA Forest Service It was hosted by the Department of Energy's DOE's Oak Ridge National Laboratory ORNL The organizing committee for the workshop included senior scientists from ORNL the USDA Forest Service and the U S Army Corps of Engineers ACE The members of the steering committee were John Barko Paul Bradford Bill Goran Jeff Holland Russell Harmon and Mike Vasievich They helped guide the workshop to a useful product by suggesting topics speakers and participants Workshop attendees included senior ecological modelers within the Forest Service DoD other federal and state agencies universities and the private sector together with ecologic resource managers in the Forest Service DoD and other government and nongovernment agencies and organizations The book never could have come to fruition without the dedicated efforts of Fred O'Hara in editing each of the chapters and making sure that the text was complete and accurate and that standard methods of expression and design were used in the text references tables and figures His careful attention to the details and to effective communication is appreciated Many people helped in bringing the book to completion

Ecological Modeling Clifford S. Russell, 2015-09-25 This volume originally published in 1975 grew out of Resources for the Future's involvement as a consultant to the Marine Ecosystem Analysis programme management within the National Oceanic and Atmospheric Agency Here researchers look at the state of the art in aquatic ecological modelling in a resource management context Although the aim of the research in this volume is specific the models used can be applied in broader contexts and provide conceptual frameworks for regional residuals environmental quality management and other ecological modelling This title is suitable for students interested in Environmental Studies

Ecological Modeling William E. Grant, Todd M. Swannack, 2011-08-26 *Ecological Modeling A Commonsense Approach to Theory and Practice* explores how simulation modeling and its new ecological applications can offer solutions to complex natural resource management problems This is a practical guide for students teachers and professional ecologists Examines four phases of the modeling process conceptual model formulation quantitative model specification model evaluation and model use Provides useful building blocks for constructing systems simulation models Includes a format for reporting the development and use of simulation models Offers an integrated systems perspective for students faculty and professionals Features helpful insights from the author gained over 30 years of university teaching I can strongly recommend the book as textbook for all courses in population dynamic modeling particularly when the course is planned for the second or third year of a bachelor study in ecology environmental science or ecological engineering It uncovers very clearly for the readers the scientific idea and thinking behind modeling and all the necessary steps in the development of models *Ecological Modeling Journal* 2009 **Ecological Modeling in a Resource Management Framework** Clifford S. Russell, United States.

National Oceanic and Atmospheric Administration, 1975 **Applying Ecosystem and Landscape Models in Natural Resource Management** Robert E. Keane, 2019-08-15 Managing today's lands is becoming an increasingly difficult task Complex ecological interactions across multiple spatiotemporal scales create diverse landscape responses to management actions that are often novel counter intuitive and unexpected To make matters worse exotic invasions human land use and global climate change complicate this complexity and make past observational ecological studies limited in application to the future Natural resource professionals can no longer rely on empirical data to analyze alternative actions in a world that is rapidly changing with few historical analogs New tools are needed to synthesize the high complexity in ecosystem dynamics into useful applications for land management Some of the best new tools available for this task are ecological and landscape simulation models However many land management professionals and scientists have little expertise in simulation modeling and the costs of training these people will probably be exorbitantly high because most ecosystem and landscape models are exceptionally complicated and difficult to understand and use for local applications This book was written to provide natural resource professionals with the rudimentary knowledge needed to properly use ecological models and then to interpret their results It is based on the lessons learned from a career spent modeling ecological systems It is intended as a reference for novice modelers to learn how to correctly employ ecosystem landscape models in natural resource management applications

and to understand subsequent modeling results

The Science and Management of Uncertainty Bruce G.

Marcot, 2020-11-26 Uncertainty can take many forms can be represented in many ways and can have important implications in decision making and policy development This book provides a rigorous scientific framework for dealing with uncertainty in real world situations and provides a comprehensive study of concepts measurements and applications of uncertainty in ecological modeling and natural resource management The focus of this book is on the kinds and implications of uncertainty in environmental modeling and management with practical guidelines and examples for successful modeling and risk analysis in the face of uncertain conditions and incomplete information Provided is a clear classification of uncertainty methods for measuring modeling and communicating uncertainty practical guidelines for capturing and representing expert knowledge and judgment explanations of the role of uncertainty in decision making a guideline to avoiding logical fallacies when dealing with uncertainty and several example cases of real world ecological modeling and risk analysis to illustrate the concepts and approaches Case topics provide examples of structured decision making statistical modeling and related topics A summary provides practical next steps that the reader can take in analyzing and interpreting uncertainty in real world situations Also provided is a glossary and a suite of references

Modeling in Natural Resource Management Tanya M.

Shenk, Alan B. Franklin, 2001 Offering a much needed overview of the basic principles for understanding and evaluating models this volume brings together the best and most current information about natural resource modeling and its on the ground application providing a valuable reference for both scientists involved with issues of natural resource management and for managers who apply the science to real world problems Tables figures index

Ecological Modelling and Engineering of Lakes and Wetlands , 2014-04-04 Ecological modelling has developed rapidly in recent decades with the focus primarily on the restoration of lakes and wetlands Ecological Modelling and Engineering in Lakes and Wetlands presents the progress being made in modelling for a wealth of applications It covers the older biogeochemical models still in use today structurally dynamic models 3D models biophysical models entire watershed models and ecotoxicological models as well as the expansion of modeling to the Arctic and Antarctic climate zones The book also addresses modelling the effect of climate change including the development of ecological models for addressing storm water pond issues which are increasingly important in urban regions where more concentrated rainfalls are a consequence of climate change The ecological engineering topics covered in the book also emphasize the advancements being made in applying ecological engineering

regimes for better environmental management of lakes and wetlands Examines recent progress towards a better understanding of these two important ecosystems Presents new results and approaches that can be used to develop better models Discusses how to increase the synergistic effect between ecosystems engineering and modelling **Modeling and Management of Resources under Uncertainty** Thomas L. Vincent, Yosef Cohen, Walter J. Grantham, Geoffrey P. Kirkwood, Jan M. Skowronski, 2013-03-08 This volume contains the proceedings of the second U S Australia workshop on Renewable Resource Management held at the East West Center Honolulu Hawaii December 9-12 1985 The workshop was jointly sponsored by the National Science Foundation USA and the Department of Science and Technology Australia under the U S Australia Cooperative Science Program The objective of the workshop was to focus on problems associated with the management of renewable resource systems A particular emphasis was given to methods for handling uncertain elements which are present in any real system Toward this end the participants were chosen so that the collective expertise included mathematical modeling dynamical control game theory ecology and practical management of real systems Each participant was invited to give an informal presentation in his field of expertise as related to the overall theme The formal papers contained in this volume were written after the workshop so that the authors could utilize the workshop experience in relating their own work to others To further encourage this exchange each paper contained in this volume was reviewed by two other participants who then wrote formal comments These comments with author's reply in some cases are attached to the end of each paper **Ecological Models of Organizations** Glenn Carroll, 1988 **Improving Natural Resource Management** Timothy C. Haas, 2011-03-14 The decision to implement environmental protection options is a political one These and other political and social decisions affect the balance of the ecosystem and how the point of equilibrium desired is to be reached This book develops a stochastic temporal model of how political processes influence and are influenced by ecosystem processes and looks at how to find the most politically feasible plan for managing an at risk ecosystem Finding such a plan is accomplished by first fitting a mechanistic political and ecological model to a data set composed of observations on both political actions that impact an ecosystem and variables that describe the ecosystem The parameters of this fitted model are perturbed just enough to cause human behaviour to change so that desired ecosystem states occur This perturbed model gives the ecosystem management plan needed to reach desired ecosystem states To construct such a set of interacting models topics from political science ecology probability and statistics are developed and explored Key features Explores politically feasible ways to manage at risk ecosystems Gives agent based models of how social groups affect ecosystems through time Demonstrates how to fit models of population dynamics to mixtures of wildlife data Presents statistical methods for fitting models of group behaviour to political action data Supported by an accompanying website featuring datasets and JAVA code This book will be useful to managers and analysts working in organizations charged with finding practical ways to sustain biodiversity or the physical environment Furthermore this book also provides a political

roadmap to help lawmakers and administrators improve institutional environmental management decision making
