Ecological Statistics Gordon A. Fox, Simoneta Negrete-Yankelevich, Vinicio J. Sosa, 2015-01-30 The application and interpretation of statistics are central to ecological study and practice Ecologists are now asking more sophisticated questions than in the past These new questions together with the continued growth of computing power and the availability of new software have created a new generation of statistical techniques These have resulted in major recent developments in both our understanding and practice of ecological statistics This novel book synthesizes a number of these changes addressing key approaches and issues that tend to be overlooked in other books such as missing censored data correlation structure of data heterogeneous data and complex causal relationships These issues characterize a large proportion of ecological data but most ecologists training in traditional statistics simply does not provide them with adequate preparation to handle the associated challenges Uniquely Ecological Statistics highlights the underlying links among many statistical approaches that attempt to tackle these issues In particular it gives readers an introduction to approaches to inference likelihoods generalized linear mixed models spatially or phylogenetically structured data and data synthesis with a strong emphasis on conceptual understanding and subsequent application to data analysis Written by a team of practicing ecologists mathematical explanations have been kept to the minimum necessary This user friendly textbook will be suitable for graduate students researchers and practitioners in the fields of ecology evolution environmental studies and computational biology who are interested in updating their statistical tool kits A companion web site provides example data sets and commented code in the R language

Effective Ecology Roger D. Cousens, 2023-08-21 Ecology is one of the most challenging of sciences with unambiguous knowledge much harder to achieve than it might seem But it is also one of the most important sciences for the future health of our planet It is vital that our efforts are as effective as possible at achieving our desired outcomes This book is intended to help individual ecologists to develop a better vision for their ecology and the way they can best contribute to science The central premise is that to advance ecology effectively as a discipline ecologists need to be able to establish conclusive answers to key questions rather than merely proposing plausible explanations for mundane observations Ecologists need clear and honest understanding of how we have come to do things the way we do them now the limitations of our approaches our goals for the future and how we may need to change our approaches if we are to maintain or enhance our relevance and credibility Readers are taken through examples to show what a critical appraisal can reveal and how this approach can benefit ecology if it is applied more routinely Ecological systems are notable for their complexity and their variability Ecology is as indicated by the title of this book a truly difficult science Ecologists have achieved a great deal but they can do better This book aims to encourage early career researchers to be realistic about their expectations to question everything not to take everything for granted and to make up their own minds

Statistics by Simulation Carsten F. Dormann, Aaron M. Ellison, 2025-06-03 An accessible guide to understanding statistics using simulations with examples from a range of scientific disciplines Real world challenges such as small sample sizes skewed distributions of data biased sampling designs and more predictors than data points are pushing the limits of classical statistical analysis This textbook provides a new tool for the statistical toolkit data simulations It shows that using simulation and data generating models is an excellent way to validate statistical reasoning and to augment study design and statistical analysis with planning and visualization Although data simulations are not new to professional statisticians Statistics by Simulation makes the approach accessible to a broader audience with examples from many fields It introduces the reasoning behind data simulation and then shows how to apply it in planning experiments or observational studies developing analytical workflows deploying model diagnostics and developing new indices and statistical methods Covers all steps of statistical practice from planning projects to post hoc analysis and model checking Provides examples from disciplines including sociology psychology ecology economics physics and medicine Includes R code for all examples with data and code freely available online Offers bullet point outlines and summaries of each chapter Minimizes the use of jargon and requires only basic statistical background and skills
