1. Which scenario favors smallest elk group size?
 - Strategy: first see if how scenario affects quality per patch (intragroup) or # of patches (intergroup)
 - After a hot year, grass quality is low
 - Low **quality per patch** - leads to high intragroup competition
 - Smaller group size is better to reduce the costs of intragroup competition, not enough resources per patch to support a large group
2. For this scenario, what mechanism favors smaller groups?
 - Low quality per patch
 - Intragroup competition increases
 - Intergroup competition stays the same - still fighting for the same # of patches
3. Which is r-selected?
 - Think: fast growing, fast reproducing, fast dying
 - Bacteria
4. Which is not a tradeoff?
 - Think: if one thing gets better, another thing has to get worse (may be implicit)
 - Taller giraffes run faster
5. What factors are most important or limiting for a species living in the rainforest?
 - Biological factors - competition
 - Environmental factors generally more important in harsh places
6. If bird feeders are moved closer together, what happens to finches?
