The Ecology of Animals. (Third edition.). Charles Sutherland Elton, 1953

Introduction to Forest Ecology and Silviculture, 2014-04-01

Foraging Behavior A.C. Kamil, J.R. Krebs, H.R. Pulliam, 2012-12-06 Foraging behavior has always been a central concern of ecology Understanding what animals eat is clearly an essential component of understanding many ecological issues including energy flow competition and adaptation Theoretical and empirical developments in the late 1960s and 1970s led to a new emphasis in the study of foraging behavior the study of individual animals in both field and laboratory This development in turn led to an explosion of interest in foraging Part of the reason for this explosion is that when foraging is studied at the individual level it is relevant to many disciplines Behaviorists including ethologists and psychologists are interested in any attempt to understand behavior Ecologists know that a better understanding of foraging will contribute to resolving a number of important ecological issues Anthropologists and others are applying the ideas coming out of the study of foraging behavior to problems within their disciplines These developments led to a multidisciplinary symposium on foraging behavior held as part of the 1978 Animal Behavior Society meetings in Seattle Washington Many ecologists ethologists and psychologists participated or attended The symposium was very successful generating a high level of excitement As a result the participants decided to publish the proceedings of the symposium Kamil Sargent 1981

Relationships of Natural Enemies and Non-prey Foods Jonathan G. Lundgren, 2009-02-26 Feeding on Non Prey Resources by Natural Enemies Moshe Coll Reports on the consumption of non prey food sources particularly plant materials by predators and parasitoids are common throughout the literature reviewed recently by Naranjo and Gibson 1996 Coll 1998a Coll and Guershon 2002 Predators belonging to a variety of orders and families are known to feed on pollen and nectar and adult parasitoids acquire nutrients from honeydew and floral and extrafloral nectar A recent publication by Wackers et al 2005 discusses the partitioning of plant resources to natural enemies from the perspective of the plant exploring the evolutionary possibility that plants enhance their defenses by recruiting enemies to food sources The present volume in contrast presents primarily the enemies perspective and as such is the first comprehensive review of the nutritional

importance of non prey foods for insect predators and parasitoids Although the ecological significance of feeding on non prey foods has long been underappreciated attempts have been made to manipulate nectar and pollen availability in crop fields in order to enhance levels of biological pest control by natural enemies van Emden 1965 Hagen 1986 Coll 1998a The importance of non prey foods for the management of pest populations is also discussed in the book *The Publishers' Trade List Annual*, 1899
