**Social Cognition and the Second Person in Human Interaction** Diana I. Pérez, Antoni Gomila, 2021-09-28 This book is a unique exploration of the idea of the second person in human interaction the idea that face to face interactions involve a distinctive form of reciprocal mental state attributions that mediates their dynamical unfolding Challenging the view of mental attribution as a sort of theory of mind Pérez and Gomila argue that the second person perspective of mental understanding is the conceptually ontogenetically and phylogenetically basic way of understanding mentality Second person interaction provides the opportunity for the acquisition of concepts of mental states of increasing complexity The book reviews the growing interest in a variety of second person phenomena both in development and in adulthood presenting research that shows how participants in human interaction attribute psychological states of a referentially transparent kind to each other This review documents the spontaneous preference for face to face interaction from eye contact to joint attention from forms of vitality to communicative intentions from interaction detection to joint action and from synchrony to interpersonal coordination Also looking at the implications and applications of the second person perspective within fields as diverse as art and morality this book is fascinating reading for students and academics in social and cognitive psychology cognitive science neuroscience and philosophy

**Handbook of Social Cognition** Robert S. Wyer, Thomas K. Srull, 1984      **Social Cognition, Motivation, and Interaction: How Do People Respond to Threats in Social Interactions?** Eva Jonas, Christina Mühlberger, 2018-01-12 If we want to understand people's responses to threats in social interactions we can distinguish between three levels of analysis On a social level of analysis we can describe people's interpersonal behavior on a cognitive level we can identify corresponding information processing mechanisms and on a neural level we can specify neural systems which underlie these processes In this Research Topic we want to present research connecting these three levels of analysis and propose their functional interconnection in social interaction We propose that threats in social interactions activate basic motivational processes which manifest in neural processes related to behavioral inhibition vs activation in a social situation This shapes our attention to new information and affects our cognitions about social identities belief systems and worldviews These changes in social cognition in turn affect people's behavior in social interactions and lead to corresponding reactions on behalf of the interaction partner Thus we assume that people's reactions to threat in interactions can be described as sequences of broader attentional processes resulting from basic motivational tendencies leading to specific social cognitions and subsequent behavior within social interactions We can analyze this sequence in order to contribute to a better understanding of social interactions The three levels of analyses social cognitive neural shed light on social interactions from different angles On the social level we can analyze how the behaviors of the interaction partners mutually affect each other and how this is accompanied by specific cognitive emotional and motivational processes On the cognitive level we can analyze people's perception of a social situation leading to attentional and reasoning processes with regard to their interaction partner's which may be accompanied by certain emotional and motivational processes and determines the behavior towards the partner's Finally we can focus on the neural mechanisms underlying cognitive emotional and motivational processes in social interactions      *Handbook of Social Cognition* Robert S. Wyer, Jr., Thomas K. Srull, 2014-02-25 This edition of the Handbook follows the first edition by 10 years The earlier edition was a promissory note presaging the directions in which the then emerging field of social cognition was likely to move The field was then in its infancy and the areas of research and theory that came to dominate the field during the next decade were only beginning to surface The concepts and methods used had frequently been borrowed from cognitive psychology and had been applied to

phenomena in a very limited number of areas Nevertheless social cognition promised to develop rapidly into an important area of psychological inquiry that would ultimately have an impact on not only several areas of psychology but other fields as well The promises made by the earlier edition have generally been fulfilled Since its publication social cognition has become one of the most active areas of research in the entire field of psychology its influence has extended to health and clinical psychology and personality as well as to political science organizational behavior and marketing and consumer behavior The impact of social cognition theory and research within a very short period of time is incontrovertible The present volumes provide a comprehensive and detailed review of the theoretical and empirical work that has been performed during these years and of its implications for information processing in a wide variety of domains The handbook is divided into two volumes The first provides an overview of basic research and theory in social information processing covering the automatic and controlled processing of information and its implications for how information is encoded and stored in memory the mental representation of persons including oneself and events the role of procedural knowledge in information processing inference processes and response processes Special attention is given to the cognitive determinants and consequences of affect and emotion The second book provides detailed discussions of the role of information processing in specific areas such as stereotyping communication and persuasion political judgment close relationships organizational clinical and health psychology and consumer behavior The contributors are theorists and researchers who have themselves carried out important studies in the areas to which their chapters pertain In combination the contents of this two volume set provide a sophisticated and in depth treatment of both theory and research in this major area of psychological inquiry and the directions in which it is likely to proceed in the future
