Ecological Security An Evolutionary Perspective On Globalization:

Ecological Security Dennis Pirages, Theresa Manley DeGeest, 2004 Global environmental politics has emerged from its initial incarnation in the arena of low politics and is rapidly becoming a high politics concern Concern over water pollution air pollution deforestation and related basic environmental issues is giving way to a broader ecological security agenda In this pathbreaking book Dennis Clark Pirages and Theresa Manley DeGeest argue for dramatically broadening the context in which security priorities are established in an age of increasing globalization Addressing the very fundamental question of the sources of premature human deaths and associated insecurity both historically and in the contemporary world the authors observe that in the twentieth century starvation killed nearly as many people as did military conflict But disease was responsible for killing nearly fourteen times as many people as was warfare And in the contemporary world of the twenty first century environmental terrorism and biological warfare are blurring the traditional distinctions between natural disasters accidental deaths and military casualties Ecological Security moves the analysis of global environmental and resource issues to the next level by developing an eco evolutionary perspective for analyzing emerging problems associated with rapid globalization Preserving future ecological security will depend upon maintaining dynamic equilibriums among human populations and between them and pathogenic microorganisms other species and the sustaining capabilities of nature This eco evolutionary framework is used to anticipate and analyze emerging demographic ecological and technological discontinuities and dilemmas associated with rapid globalization The authors conclude by stressing the need for new kinds of global public goods to mitigate the harshest impacts of these rapid and interrelated changes **Energy and**

Environmental Challenges to Security Stephen Stec, Besnik Baraj, 2009-01-29 On 21 November 2007 the grand and elegant Delegates Hall of the Hungarian Parliament was the scene of the opening of a conference to discuss some of the most pressing issues of the day those related to our unending thirst for energy its environmental consequences and the challenges that these bear on security Over the next 3 days scientists parliamentarians and their guests confronted challenged teased and cajoled each other in a NATO Advanced Research Workshop ARW entitled Energy and Environmental Challenges to Security affirming that knowledge and public service hold the keys to solving our greatest challenges The magnitude of the security challenge was confirmed while this volume was being prepared In mid 2008 the International Energy Agency issued a report concluding that US 45 trillion would be needed over the next half century to prevent energy shortages and greenhouse gas emissions from undermining global economic growth But lest such large numbers cause us all to shrug this volume brings attention to some of the more manageable aspects of the environment and energy security challenge from addressing conflict resources such as illegal timber that contribute to corruption and regional instability to means and mechanisms to enable the diversification of energy supplies to environmental risk reduction strategies for particular installations The participants in the Hungarian Parliament building were atypical for a NATO Advanced Research Workshop

Environmental Security Rita Floyd, Richard A. Matthew, 2013 Economic development population growth and poor resource management have combined to alter the planet's natural environment in dramatic and alarming ways. For over twenty years, considerable research and debate have focused on clarifying or disputing linkages between various forms of environmental change and various understandings of security. At one extreme lie sceptics who contend that the linkages are weak or even non-existent; they are simply attempts to harness the resources of the security arena to an environmental agenda. At the other extreme lie those who believe that these linkages may be the most important drivers of security in the 21st century; indeed, the very future of humankind may be at stake. This book brings together contributions from a range of disciplines to present a critical and comprehensive overview of the research and debate linking environmental factors to security. It provides a framework for representing and understanding key areas of intellectual convergence and disagreement, clarifying achievements of the research as well as identifying its weaknesses and gaps. Part I explores the various ways environmental change and security have been linked and provides principal critiques of this linkage. Part II explores the linkage through analysis of key issue areas such as climate change, energy, water, food, population, and development. Finally, the book concludes with a discussion of the value of this subfield of security studies and with some ideas about the questions it might profitably address in the future. This volume is the first to provide a comprehensive overview of the field. With contributions from around the world, it combines established and emerging scholars to offer a platform for the next wave of research and policy activity. It is invaluable for both students and practitioners interested in international relations, environment studies, and human geography.

Environmental Security and Gender Nicole Detraz, 2014-08-21 Over the past 20 years, scholars, policymakers, and the media have increasingly recognized the links between both traditional and non-traditional security issues and the changing condition of the global environment. Concepts such as environmental security and resource conflict have been used to hint at these significant linkages. While there has been a good deal of scholarly work conducted that seeks to identify the ways that actors link these concepts, there has been little examination of the intersection between approaches to environmental security and gender. This book explores this intersection to provide an insight into the gendered nature of both global environmental politics and security studies. It examines how the issues of security and the environment are linked to theory and practice and the extent to which gender informs these discussions. By adopting a feminist environmental security discourse, this book provides crucial redefinitions of key concepts and offers new insights into the ways we understand security-environment connections. Case studies evaluate if and how environment and security discourses are being used to understand a range of environmental issues and how a feminist environmental security discourse contributes to our understanding of security-environment connections. This multidisciplinary volume draws on literature from the environmental sciences, security studies, and sociology to highlight the complex human insecurities that often accompany environmental change. As conceptualizations of security continue to shift and broaden to include

environmental issues and concerns it is imperative that gender informs the debate **Achieving Environmental Security** P. H.
