Money, Trade and Economic Growth Harry Gordon Johnson,1962 *Population Growth, Factor Accumulation, and Productivity* Lant Pritchett,1996 **Nber Macroeconomics Annual 1997** Ben S. Bernanke,Julio J. Rotemberg,1997

Economic Growth David N. Weil,2005 Written by David N Weil of Brown University one of the top researchers in the field this textbook is intended for undergraduate courses in economic growth and it also will be of interest to instructors teaching courses on economic development and intermediate macroeconomics In essence the book examines the interesting question of why some countries are rich and some are poor why they differ in their levels of income and their rates of economic growth The book is richly empirical and it features authoritative up to date coverage reflecting the most important findings of contemporary research Engagingly written it presents a wealth of colorful examples details and anecdotes New Developments in Productivity Analysis Charles R. Hulten,Edwin R. Dean,Michael Harper,2007-11-01 The productivity slowdown of the 1970s and 1980s and the resumption of productivity growth in the 1990s have provoked controversy among policymakers and researchers Economists have been forced to reexamine fundamental questions of measurement technique Some researchers argue that econometric approaches to productivity measurement usefully address shortcomings of the dominant index number techniques while others maintain that current productivity statistics underreport damage to the environment In this book the contributors propose innovative approaches to these issues The result is a state of the art exposition of contemporary productivity analysis Charles R Hulten is professor of economics at the University of Maryland He has been a senior research associate at the Urban Institute and is chair of the Conference on Research in Income and Wealth of the National Bureau of Economic Research Michael Harper is chief of the Division of Productivity Research at the Bureau of Labor Statistics Edwin R Dean formerly associate commissioner for Productivity and Technology at the Bureau of Labor Statistics is adjunct professor of economics at The George Washington University Economic Growth and Development Hendrik Van den Berg,2001 This textbook by Hendrik Van den Berg on Economic Growth and Development presents a long awaited synthesis of Development Economics and Growth Theory It also incorporates the recent contributions to our understanding of economic growth from the fields of economic history and the new institutional economics By basing its analysis on the recent advances in growth theory the book offers a unified approach to all episodes of economic growth for countries at all levels of development and throughout history Students will be comfortable with an analysis that enables them to understand economic growth in their own country as well as in economies very different from their own The unified theoretical framework greatly facilitates students understanding of the process of economic growth and the many cases and examples highlight the fascinating diversity of our world Winning the Global Game Jeffrey Rosensweig,2010-05-11 In the 21st century global economy emerging nations will provide almost half of the potential customers for western goods and services concludes international business expert Jeffrey A Rosensweig Drawing on extensive research Rosensweig contends

that firms with truly global strategies will profit from the untapped resources of emerging markets and at the same time improve the living standards of the world's poor. Dismissing the doomsday scenario that so-called Third World nations will continue to be mired in poverty, he argues persuasively that western executives must break out of the mindset that profitable ventures can only be found within the Triad of the United States, Europe, and Japan. Rosensweig reminds us that American exports to emerging nations have tripled since 1986. He projects that by the year 2010 the world will contain six great regional economies, four of them in Asia, and that three of every eight middle class consumers will reside in the developing world. In clear nontechnical language, he explains how executives can identify trends of globalization and apply them to business strategy, particularly to what he calls a time-phased global strategy for synchronizing a firm's investments with the progress of emerging middle classes. *Winning the Global Game* demonstrates that adopting a global perspective now is a win-win strategy that links people and profits. It will be important reading for all multinational executives and managers in firms which are going global. The chapter on 21st century personal career strategy will appeal particularly to the aspiring global executive.

What Works in Development? Jessica Cohen, William Easterly, 2010-02-01. *What Works in Development* brings together leading experts to address one of the most basic yet vexing issues in development: what do we really know about what works and what doesn't in fighting global poverty? The contributors, including many of the world's most respected economic development analysts, focus on the ongoing debate over which paths to development truly maximize results. Should we emphasize a big picture approach focusing on the role of institutions, macroeconomic policies, growth strategies, and other country-level factors? Or is a more grassroots approach the way to go, with the focus on particular microeconomic interventions such as conditional cash transfers, bed nets, and other microlevel improvements in service delivery on the ground? The book attempts to find a consensus on which approach is likely to be more effective. Contributors include Nana Ashraf (Harvard Business School), Abhijit Banerjee (MIT), Nancy Birdsall (Center for Global Development), Anne Case (Princeton University), Jessica Cohen (Brookings), William Easterly (NYU and Brookings), Alaka Halla (Innovations for Poverty Action), Ricardo Hausman (Harvard University), Simon Johnson (MIT), Peter Klenow (Stanford University), Michael Kremer (Harvard), Ross Levine (Brown University), Sendhil Mullainathan (Harvard), Ben Olken (MIT), Lant Pritchett (Harvard), Martin Ravallion (World Bank), Dani Rodrik (Harvard), Paul Romer (Stanford University), and David Weil (Brown). *Policies for Long-run Economic Growth*, 1992.

A Contribution to the Empirics of Economic Growth N. Gregory Mankiw, David Romer, David N. Weil, 1990. This paper examines whether the Solow growth model is consistent with the international variation in the standard of living. It shows that an augmented Solow model that includes accumulation of human as well as physical capital provides an excellent description of the cross-country data. The model explains about 80 percent of the international variation in income per capita, and the estimated influences of physical capital accumulation, human capital accumulation, and population growth confirm the model's predictions. The paper also examines the implications of the Solow model for convergence in standards of living that

is for whether poor countries tend to grow faster than rich countries The evidence indicates that holding population growth and capital accumulation constant countries converge at about the rate the augmented Solow model predicts
