Does God Play Dice? Ian Stewart, 1997-06-26 This revised edition of *Does God Play Dice* takes a fresh look at chaos theory its achievements potential and the latest practical applications of chaos theory including the development of intelligent heart pacemakers *A Biologist's Guide to Mathematical Modeling in Ecology and Evolution* Sarah P. Otto, Troy Day, 2011-09-19

Thirty years ago biologists could get by with a rudimentary grasp of mathematics and modeling Not so today In seeking to answer fundamental questions about how biological systems function and change over time the modern biologist is as likely to rely on sophisticated mathematical and computer based models as traditional fieldwork In this book Sarah Otto and Troy Day provide biology students with the tools necessary to both interpret models and to build their own The book starts at an elementary level of mathematical modeling assuming that the reader has had high school mathematics and first year calculus Otto and Day then gradually build in depth and complexity from classic models in ecology and evolution to more intricate class structured and probabilistic models The authors provide primers with instructive exercises to introduce readers to the more advanced subjects of linear algebra and probability theory Through examples they describe how models have been used to understand such topics as the spread of HIV chaos the age structure of a country speciation and extinction Ecologists and evolutionary biologists today need enough mathematical training to be able to assess the power and limits of biological models and to develop theories and models themselves This innovative book will be an indispensable guide to the world of mathematical models for the next generation of biologists A how to guide for developing new mathematical models in biology Provides step by step recipes for constructing and analyzing models Interesting biological applications Explores classical models in ecology and evolution Questions at the end of every chapter Primers cover important mathematical topics Exercises with answers Appendixes summarize useful rules Labs and advanced material available **Does God Play Dice?**

Ian Stewart, 1989 *Reliability Assessments* Franklin Richard Nash, Ph.D., 2017-07-12 This book provides engineers and scientists with a single source introduction to the concepts models and case studies for making credible reliability assessments It satisfies the need for thorough discussions of several fundamental subjects Section I contains a comprehensive overview of assessing and assuring reliability that is followed by discussions of Concept of randomness and its relationship to chaos Uses and limitations of the binomial and Poisson distributions Relationship of the chi square method and Poisson curves Derivations and applications of the exponential Weibull and lognormal models Examination of the human mortality bathtub curve as a template for components Section II introduces the case study modeling of failure data and is followed by analyses of 5 sets of ideal Weibull lognormal and normal failure data 83 sets of actual real failure data The intent of the modeling was to find the best descriptions of the failures using statistical life models principally the Weibull lognormal and normal models for characterizing the failure probability distributions of the times cycles and miles to failure during laboratory or field testing The statistical model providing the preferred characterization was determined empirically by

choosing the two parameter model that gave the best straight line fit in the failure probability plots using a combination of visual inspection and three statistical goodness of fit GoF tests This book offers practical insight in dealing with single item reliability and illustrates the use of reliability methods to solve industry problems **Tales of the Turing Church: Hacking religion, enlightening science, awakening technology** Giulio Prisco,2020-02-07 This book explores intersections of science and religion spirituality and technology engineering and science fiction mind and matter and outlines a new cosmic transhumanist religion Hacking religion enlightening science awakening technology **From Here to Infinity** Ian Stewart,1996 A retitled and revised edition of Ian Stewart s The Problem of Mathematics this is the perfect guide to today s mathematics Read about the latest discoveries including Andrew Wile s amazing proof of Fermat s Last Theorem the newest advances in knot theory the Four Colour Theorem Chaos Theory and fake four dimensional spaces See how simple concepts from probability theory shed light on the National Lottery and tell you how to maximize your winnings Discover how infinitesimals become respectable why there are different kinds of infinity and how to square the circle with the mathematical equivalent of a pair of scissors **Shaking the Invisible Hand** B. Moore,2006-04-04 This book makes the case that economies are complex systems and in response to this develops a unique dynamic nonequilibrium process analysis of macroeconomics It provides a brief introduction to complex systems chaos theory and unit roots The importance and implications of contingency for economic behaviour are developed **Mechanical Catalysis** Gerhard Swiegers,2008-10-03 Provides a clear and systematic description of the key role played by catalyst reactant dynamism including i the fundamental processes at work ii the origin of its general and physical features iii the way it has evolved and iv how it relates to catalysis in man made systems Unifies homogeneous heterogeneous and enzymatic catalysis into a single conceptually coherent whole Describes how to authentically mimic the underlying principles of enzymatic catalysis in man made systems Examines the origin and role of complexity and complex Systems Science in catalysis very hot topics in science today **International Encyclopedia of Systems and Cybernetics** Charles François,2011-12-07 No detailed description available for International Encyclopedia of Systems and Cybernetics ***The Problems of Mathematics*** Ian Stewart,1992 For the second edition of this introduction to today s mathematics Ian Stewart has revised the text to take account of recent developments in the field There are three new chapters including one on Kepler s sphere packing problem which has taken 380 years to solve
