Does God Play Dice? Ian Stewart, **A Biologist's Guide to Mathematical Modeling in Ecology and Evolution** Sarah P. Otto, Troy Day, 2011-09-19 Thirty years ago biologists could get by with a rudimentary grasp of mathematics and modeling Not so today In seeking to answer fundamental questions about how biological systems function and change over time the modern biologist is as likely to rely on sophisticated mathematical and computer based models as traditional fieldwork In this book Sarah Otto and Troy Day provide biology students with the tools necessary to both interpret models and to build their own The book starts at an elementary level of mathematical modeling assuming that the reader has had high school mathematics and first year calculus Otto and Day then gradually build in depth and complexity from classic models in ecology and evolution to more intricate class structured and probabilistic models The authors provide primers with instructive exercises to introduce readers to the more advanced subjects of linear algebra and probability theory Through examples they describe how models have been used to understand such topics as the spread of HIV chaos the age structure of a country speciation and extinction Ecologists and evolutionary biologists today need enough mathematical training to be able to assess the power and limits of biological models and to develop theories and models themselves This innovative book will be an indispensable guide to the world of mathematical models for the next generation of biologists A how to guide for developing new mathematical models in biology Provides step by step recipes for constructing and analyzing models Interesting biological applications Explores classical models in ecology and evolution Questions at the end of every chapter Primers cover important mathematical topics Exercises with answers Appendixes summarize useful rules Labs and advanced material available

Reliability Assessments Franklin Richard Nash, Ph.D., 2017-07-12 This book provides engineers and scientists with a single source introduction to the concepts models and case studies for making credible reliability assessments It satisfies the need for thorough discussions of several fundamental subjects Section I contains a comprehensive overview of assessing and assuring reliability that is followed by discussions of Concept of randomness and its relationship to chaos Uses and limitations of the binomial and Poisson distributions Relationship of the chi square method and Poisson curves Derivations and applications of the exponential Weibull and lognormal models Examination of the human mortality bathtub curve as a template for components Section II introduces the case study modeling of failure data and is followed by analyses of 5 sets of ideal Weibull lognormal and normal failure data 83 sets of actual real failure data The intent of the modeling was to find the best descriptions of the failures using

statistical life models principally the Weibull lognormal and normal models for characterizing the failure probability distributions of the times cycles and miles to failure during laboratory or field testing The statistical model providing the preferred characterization was determined empirically by choosing the two parameter model that gave the best straight line fit in the failure probability plots using a combination of visual inspection and three statistical goodness of fit GoF tests This book offers practical insight in dealing with single item reliability and illustrates the use of reliability methods to solve industry problems

Interdisciplinary Perspectives on Cosmology and Biological Evolution Hilary D. Regan, Mark William Worthing, 2002 This collection of essays examines cosmology biology and evolutionary theory

Van Nostrand's Scientific Encyclopedia Douglas M. Considine, Glenn D. Considine, 2013-12-11 Advancements in science and engineering have occurred at a surprisingly rapid pace since the release of the seventh edition of this encyclopedia Large portions of the reference have required comprehensive rewriting and new illustrations Scores of new topics have been included to create this thoroughly updated eighth edition The appearance of this new edition in 1994 marks the continuation of a tradition commenced well over a half century ago in 1938 Van Nostrand's Scientific Encyclopedia First Edition was published and welcomed by educators worldwide at a time when what we know today as modern science was just getting underway The early encyclopedia was well received by students and educators alike during a critical time span when science became established as a major factor in shaping the progress and economy of individual nations and at the global level A vital need existed for a permanent science reference that could be updated periodically and made conveniently available to audiences that numbered in the millions The pioneering VNSE met these criteria and continues today as a reliable technical information source for making private and public decisions that present a backdrop of technical alternatives

Environment and Planning, 1996 Journal of urban planning and design Publishes research in the application of formal methods methods models and theories to spatial problems involving the built environment and the spatial structure of cities and regions Includes the application of computers to planning and design in particular the use of shape grammars artificial intelligence and morphological methods to buildings and towns the use of multimedia and GIS in urban and regional planning and the development of ideas concerning the virtual city

The Military Landscape John T. Dockery, Alexander Edward Richard Woodcock, 1993

William Harvey and the Use of Purpose in the Scientific Revolution Emerson Thomas McMullen, 1998 A study of the English scientist Harvey 1576-1657 who is credited with discovering that blood circulates and of how he and his contemporaries thought about purpose and chance in the universe Challenges historians and biographers who portray him as acting and thinking like a modern scientist and shows how his deep religious beliefs particularly in divine providence grew out of his political and religious environment and influenced his work Paper edition 0958 9 37 00

Phenomenology of Civilization Maurice Eisenstein, 1999 Phenomenology of Civilization explores the philosophy of Edmund Husserl and R G Collingwood two of the most influential

philosophers of the twentieth century Husserl founded phenomenology which has had a direct effect on contemporary philosophy and Collingwood though less formally known is still one of the most commonly read twentieth century philosophers Maurice Eisenstein examines their work in relation to recent philosophy particularly focusing on existentialism Heideggerian phenomenology and postmodernism He brings these two philosophers together because they were contemporaries of each other addressed the same audience and therefore had similar issues to influence them This discussion of Husserl and Collingwood's work moves beyond Husserl's phenomenology and Collingwood's typical association with Hegel or Kant to a new understanding of their ideas through an association with each other in regard to contemporary philosophy and political theory Eisenstein's discoveries place Husserl and Collingwood into the main Western liberal political tradition with Dewey and James rather than the more radical critique of that tradition with Sartre and Heidegger
