**Domain-Specific Processors** Shuvra S. Bhattacharyya, Ed F. Deprettere, Jürgen Teich, 2003-11-11 Ranging from low level application and architecture optimizations to high level modeling and exploration concerns this authoritative reference compiles essential research on various levels of abstraction appearing in embedded systems and software design It promotes platform based design for improved system implementation and modeling and enhanced performance and cost analyses Domain Specific Processors relies upon notions of concurrency and parallelism to satisfy performance and cost constraints resulting from increasingly complex applications and architectures and addresses concepts in specification simulation and verification in embedded systems and software design Multi-Sensor Image Fusion and Its Applications Rick S. Blum, Zheng Liu, 2018-10-03 Taking another lesson from nature the latest advances in image processing technology seek to combine image data from several diverse types of sensors in order to obtain a more accurate view of the scene very much the same as we rely on our five senses Multi Sensor Image Fusion and Its Applications is the first text dedicated to the theory and practice of the registration and fusion of image data covering such approaches as statistical methods color related techniques model based methods and visual information display strategies After a review of state of the art image fusion techniques the book provides an overview of fusion algorithms and fusion performance evaluation The following chapters explore recent progress and practical applications of the proposed techniques to solving problems in such areas as medical diagnosis surveillance and biometric systems remote sensing nondestructive evaluation blurred image restoration and image quality assessment Recognized leaders from industry and academia contribute the chapters reflecting the latest research trends and providing useful algorithms to aid implementation Supplying a 28 page full color insert Multi Sensor Image Fusion and Its Applications clearly demonstrates the benefits and possibilities of this revolutionary development It provides a solid knowledge base for applying these cutting edge techniques to new challenges and creating future advances

**Document and Image Compression** Mauro Barni,2018-10-08 Although it s true that image compression research is a mature field continued improvements in computing power and image representation tools keep the field spry Faster processors enable previously intractable compression algorithms and schemes and certainly the demand for highly portable high quality images will not abate Document and Image Compression highlights the current state of the field along with the most probable and promising future research directions for image coding Organized into three broad sections the book examines the currently available techniques future directions and techniques for specific classes of images It begins with an introduction to multiresolution image representation advanced coding and modeling techniques and the basics of perceptual image coding This leads to discussions of the JPEG 2000 and JPEG LS standards lossless coding and fractal image compression New directions are highlighted that involve image coding and representation paradigms beyond the wavelet

based framework the use of redundant dictionaries the distributed source coding paradigm and novel data hiding techniques The book concludes with techniques developed for classes of images where the general purpose algorithms fail such as for binary images and shapes compound documents remote sensing images medical images and VLSI layout image data Contributed by international experts Document and Image Compression gathers the latest and most important developments in image coding into a single convenient and authoritative source Broadband Last Mile Nikil Jayant, 2018-10-03 Broadband Last Mile Access Technologies for Multimedia Communications provides in depth treatments of access technologies and the applications that rely upon them or support them It examines innovations and enhancements along multiple dimensions in access with the overarching goal of ensuring that the last mile is not the weak link in the broadband chain Written by experts from the academic and commercial segments of the field the book s self contained sections address topics related to the disciplines of communications networking computing and signal processing The core of this treatment contains contemporary reviews of broadband pipes in the classes of copper cable fiber wireless and satellite It emphasizes the coexistence of these classes within a network the importance of optical communications for unprecedented bandwidth and the flexibility and mobility provided by wireless The book also includes perspective on the increasingly important topic of network management providing insights that are true regardless of the nature of the pipe The text concludes with a discussion of newly emerging applications and broadband services This book offers an all in one treatment of the physical pipes and network architectures that make rich and increasingly personalized applications possible It serves as a valuable resource for researchers and practitioners working in the increasingly pervasive field of broadband Processor Design Challenges Ed F. Deprettere, Jurgen Teich, Stamatis Vassiliadis, 2002-03-13 This book presents a coherent introduction to and an overview of state of the art techniques in the design of complex embedded systems The volume brings together revised papers initially presented at a workshop held at Samos Greece in July and reviewed invited articles The papers are organized in topical sections on system level design and simulation compiler and mapping technology embedded processor and architectures and applications **Digital Systems and Applications** Vojin G. Oklobdzija, 2017-12-19 New design architectures in computer systems have surpassed industry expectations Limits which were once thought of as fundamental have now been broken Digital Systems and Applications details these innovations in systems design as well as cutting edge applications that are emerging to take advantage of the fields increasingly sophisticated capabilities This book features new chapters on parallelizing iterative heuristics stream and wireless processors and lightweight embedded systems This fundamental text Provides a clear focus on computer systems architecture and applications Takes a top level view of system organization before moving on to architectural and organizational concepts such as superscalar and vector processor VLIW architecture as well as new trends in multithreading and multiprocessing includes an entire section dedicated to embedded systems and their applications Discusses topics such

as digital signal processing applications circuit implementation aspects parallel I O algorithms and operating systems

Concludes with a look at new and future directions in computing Features articles that describe diverse aspects of computer usage and potentials for use Details implementation and performance enhancing techniques such as branch prediction register renaming and virtual memory Includes a section on new directions in computing and their penetration into many new fields and aspects of our daily lives

System-level Modelling and Design Space Exploration for Multiprocessor

Embedded System-on-chip Architectures Cagkan Erbas, 2006 Modern embedded systems come with contradictory design constraints On one hand these systems often target mass production and battery based devices and therefore should be cheap and power efficient On the other hand they still need to show high sometimes real time performance and often support multiple applications and standards which requires high programmability This wide spectrum of design requirements leads to complex heterogeneous System on Chip SoC architectures consisting of several types of processors from fully programmable microprocessors to configurable processing cores and customized hardware components integrated on a single chip This study targets such multiprocessor embedded systems and strives to develop algorithms methods and tools to deal with a number of fundamental problems which are encountered by the system designers during the early design stages
