Educational Computing and Problem Solving W Michael Reed, John K Burton, 2019-11-14 First published in 1988 Professionals who are on the cutting edge of educational computing discuss in this provocative new book one of the most exciting prospects of the field harnessing the power of the computer to enhance the development of problem solving abilities Here is everything that educators will need to know to use computers to improve higher level skills such as problem solving and critical thinking Current aspects of problem solving theory a philosophical case for including programming languages in the curriculum state of the art research on computers and problem solving and a look at problem solving software are included in this comprehensive volume The research and its application to instruction are grounded in problem solving theory making this book a unique and critical addition to the existing literature Educational Computing Cleborne D. Maddux, Dee LaMont Johnson, Jerry Willis, 1997 Focusing on general concepts and the theory and research on teaching learning and technology this text is aimed at those who already have basic computing skills It is geared to answering the question of what a teacher would do differently if he or she had computers in the classroom *An Introduction to Educational Computing* Nicholas John Rushby, 2019-05-28 In both education and training teachers are faced with many and varied problems relating to their teaching and their students learning Educational technology in its widest sense provides teachers with methods and tools which if properly used can alleviate some of these problems The computer is one such tool offering within certain limitations some possible solutions Originally published in 1979 this book describes the use of the computer as a resource and as a manager in education and training It discusses the use potential and limitations of this technology in helping the teacher and trainer Beginning with a consideration of the role of the computer as a mediator in the flow of information between the student and his learning environment the book goes on to look at Computer Assisted Learning from an educational viewpoint the strength and weaknesses of a number of different media and the problems of managing modular courses and course structures and handling information on students performance and progress A chapter on informatics and education addresses the problem of what both teachers and students should know about computers while the final chapter examines the practical problems of prompting and organising the appropriate use of this technology

Problem Solving and Critical Thinking for Computer Science Educators Cathleen A. Norris, James L. Poirot, 1991 The eight papers presented in this monograph are a result of the Problem Solving and Critical Thinking Research Workshop that was held in conjunction with the 1990 National Educational Computing Conference NECC The intent of the workshop was to provide a unique forum for researchers to share ideas in a special area of educational computing The monograph provides an overview of the general issues of problem solving and critical thinking in education as well as specialized areas of interest in intelligent tutoring and program construction The papers included in this monograph are 1 Problem Solving Critical Thinking and Computing An Overview Cathleen A Norris and James L Poirot 2 Mindstorms Revisited Computers

Richard C. Forcier, Don E. Descy, 2005 For Computers in Education and Instructional Technology courses This text describes the computer as a necessary classroom tool that not only empowers teachers to teach their students to use computers to solve problems but also shows teachers how to do the same The text explains technical matters in language that s understandable to the non computer savvy and includes numerous examples drawn from both PC Windows and Macintosh platforms The authors use problem solving models to clarify specific applications and incorporate national international standards to create a text that works across a broad educational spectrum The inspiration for this readable student friendly text is the idea that technology should be a means to an end not the focus of attention **Computer-Based Learning**

Environments and Problem Solving Erik De Corte, Marcia C. Linn, Heinz Mandl, Lieven Verschaffel, 2013-06-29 Most would agree that the acquisition of problem solving ability is a primary goal of education The emergence of the new information technologies in the last ten years has raised high expectations with respect to the possibilities of the computer as an instructional tool for enhancing students problem solving skills This volume is the first to assemble review and discuss the theoretical methodological and developmental knowledge relating to this topical issue in a multidisciplinary confrontation of highly recommended experts in cognitive science computer science educational technology and instructional psychology Contributors describe the most recent results and the most advanced methodological approaches relating to the application of the computer for encouraging knowledge construction stimulating higher order thinking and problem solving and creating powerful learning environments for pursuing those objectives The computer applications relate to a variety of content domains and age levels **Teaching Computational Thinking in Primary Education** Ozcinar, Huseyin, Wong,
