Effects Of Supervisory Train Control Technology On Operator Attention:

Effects of Supervisory Train Control Technology on Operator Attention U.s. Department of Transportation,2013-12 This report describes an experiment evaluating the effects of supervisory control automation on attention allocation while operating a train The study compared two levels of supervisory control partial and full to manual control in terms of how it affects vigilance detection and situation awareness Human performance was measured using a human in the loop train simulator To evaluate vigilance participants were asked to detect two types of automation failures and react to obstructions on the track Situation awareness was measured using the Situation Awareness Global Assessment Technique SAGAT in which the simulation was suspended at periodic intervals and the subjects answered questions about the system These answers were compared to objective measures of system performance

The Design of Future Things Don Norman,2009-05-12 Donald A Norman a popular design consultant to car manufacturers computer companies and other industrial and design outfits has seen the future and is worried In this long awaited follow up to The Design of Everyday Things he points out what s going wrong with the wave of products just coming on the market and some that are on drawing boards everywhere from smart cars and homes that seek to anticipate a user s every need to the latest automatic navigational systems Norman builds on this critique to offer a consumer oriented theory of natural human machine interaction that can be put into practice by the engineers and industrial designers of tomorrow s thinking machines This is a consumer oriented look at the perils and promise of the smart objects of the future and a cautionary tale for designers of these objects many of which are already in use or development

Simulators for Transportation Human Factors Mark S. Young,Michael G. Lenné,2017-07-06 Simulation continues to be a growth area in transportation human factors From empirical studies in the laboratory to the latest training techniques in the field simulators offer myriad benefits for the experimenter and the practitioner This book draws together current trends in research and training simulators for the road rail air and sea sectors to inform the reader how to maximize both validity and cost effectiveness in each case Simulators for Transportation Human Factors provides a valuable resource for both researchers and practitioners in transportation human factors on the use of simulators giving readers concrete examples and case studies of how simulators have been developed and used in empirical research as well as training applications It offers useful and usable information on the functional requirements of simulators without the need for any background knowledge on the technical aspects focusing on the state of the art of research and applications in transport

Vanderburg, 2000-12-15 Why does modern technology succeed so brilliantly in some respects and simultaneously fail in others While he was completing a doctoral thesis in mechanical engineering in the late 60s and early 70s Willem Vanderburg became convinced that the environmental crisis and the possible limits to growth would require a fundamental change in the engineering management and regulation of technology In this volume he exposes the limitations of conventional approaches in these fields Modern societies urgently need to rethink the intellectual division of labour in science and technology and the corresponding organization of the

university corporation and government in order to get out of a self destructive pattern where problems are first created by some than then dealt with by others making it almost impossible to get to the roots of anything The result is what he calls the labyrinth of technology a growing patchwork of compensations that merely displace and transform problems from one place to another The author s diagnosis suggests the remedy a new preventive strategy that situates technological and economic growth in its human societal and biospheric contexts and calls for a synthesis of methods in engineering management and public policy and of approaches in the social sciences and humanities He also suggests that this same synthesis can be applied in medicine law social work and other professions The Labyrinth of Technology is a unique and invaluable text for students academics and laypersons in all disciplines and speaks to those who are torn between the benefits that modern technology provides and the difficulties it creates in our individual and collective lives
