Management Dr Anthony Buckley,2017 **Effectuation** Saras D. Sarasvathy,2009-01-01 The concept of effectuation is as subtle as it is profound On the one hand it challenges long held beliefs about the nature of cause and effect in social science On the other hand it generates a host of new insights about social phenomena This concept is particularly well suited to analyzing entrepreneurial behavior behaviors undertaken in settings where the relationship between cause and effect is understood at best very poorly Jay B Barney The Ohio State University US Things rarely turn out as we expected or intended Neither rational choice between well defined prospects nor commitment to a vision which can be realised by will power or persuasion offers a credible representation of much human activity even the activities of entrepreneurs But although uncertainty or unknowledge is inescapable it may be productively managed If we understand our present circumstances and some of its possibilities build constructive relationships with others and be ready to adjust both our objectives and the means of achieving them in order to take advantage of new contingencies then we can at least participate in shaping our own future By taking this perspective Saras Sarasvathy makes entrepreneurship a natural human activity expressing the limitations and potential of human motivation and human intelligence Brian J Loasby University of Stirling UK In Effectuation Saras Sarasvathy presents a carefully researched and reasoned view of entrepreneurial behavior that both challenges and extends prevailing wisdom in the field There is little doubt that these ideas will serve as an important foundation for anyone desirous of stimulating positive action in the world With Effectuation we are equipped to provide a generation of students and managers with the methods to make and find opportunities that create value everywhere Leonard A Schlesinger President Babson College US To effectuate is to engage in a specific type of entrepreneurial action It has special importance for situations where the future is truly unknowable or human agency is of primary importance In Effectuation Saras Sarasvathy explores the theory and techniques of non predictive control for creating new firms markets and economic opportunities Using empirical and theoretical work done in collaboration with Nobel Laureate Herbert A Simon the author employs methods from cognitive science and behavioral economics to develop the notion of entrepreneurial expertise and effectuation Supportive empirical evidence is provided by the author s study of 27 entrepreneurs as well as other independent studies The book then traces the consequences of effectuation for business management economics and social philosophy The author

finds that effectuators generate constraint satisfying solutions rather than searching for optimal ones make rather than find opportunities and in a deep sense convert as if propositions into even if ones The way they accomplish this is the central discussion of the book Students and scholars of entrepreneurship will find this path breaking research of great value The book s conclusions will also be of interest to those in the fields of behavioral and evolutionary economics cognitive science and management

Effectuation Saras Sarasvathy,2024-06-30 Effectuation has become the basis for educating entrepreneurs and managers Derived from cognitive and behavioral economic studies of expert entrepreneurs effectuation shows how to cocreate value in highly uncertain situations The framework of effectuation consists in techniques that minimize the use of predictive information and ways to turn control itself into strategy In doing so the effectual process opens up radically new ways to rethink a variety of fundamental concepts in all the social sciences This ranges from risk and return to markets and governments in economics attitudes toward ends and means in psychology opportunism and altruism in social psychology and even success and failure in strategic management Effectuation theory inverts several older approaches in what Herbert Simon referred to as the sciences of the artificial These inversions suggest an entrepreneurial method based on non predictive control that complements the predictive control techniques of the scientific method
