Statistical Modelling of Occupant Behaviour Jan Kloppenborg Møller, Marcel Schweiker, Rune Korsholm Andersen, Burak Gunay, Selin Yilmaz, Verena Marie Barthelmes, Henrik Madsen, 2024-01-26 Do you have data on occupant behaviour indoor environment or energy use in buildings Are you interested in statistical analysis and modelling Do you have a specific research question and dataset and would like to know how to answer the question with the data available Statistical Modelling of Occupant Behaviour covers a range of statistical methods and models used for modelling energy and comfort related occupant behaviour in buildings It is a classical textbook on statistics including many practical examples related to occupant behaviour that are either taken from real research problems or adapted from such The main focus is traditional statistical techniques based on the likelihood principle that can be applied to occupant behaviour modelling including General generalised linear and survival models Mixed effect and hierarchical models Linear time series and Markov models Linear state space and hidden Markov models Illustration of all methods using occupant behaviour examples implemented in R The built environment affects occupants who live and work in it and occupants affect the built environment by adapting it to their needs for example by adapting their indoor environments by interacting with building components and systems These adaptive behaviours account for great uncertainty in the prediction of building energy use and indoor environmental conditions Occupant behaviour is complex and multi disciplinary but can be successfully modelled using statistical approaches Statistical Modelling of Occupant Behaviour is written for researchers and advanced practitioners who work with real world applications and modelling of occupant data It describes the kinds of statistical models that may be used in various occupant behaviour modelling research It gives a theoretical overview of these methods and then applies them to the study of occupant behaviour using readily replaceable examples in the R environment that are based on actual and experimental data

Implementing Reproducible Research Victoria Stodden,Friedrich Leisch,Roger D. Peng,2018-12-14 In computational science reproducibility requires that researchers make code and data available to others so that the data can be analyzed in a similar manner as in the original publication Code must be available to be distributed data must be accessible in a readable format and a platform must be available for widely distributing the data and code In addition both data and code need to be licensed permissively enough so that others can reproduce the work without a substantial legal burden Implementing Reproducible Research covers many of the elements necessary for conducting and distributing reproducible research It explains how to accurately reproduce a scientific result Divided into three parts the book discusses the tools practices and dissemination platforms for ensuring reproducibility in computational science It describes Computational tools such as Sweave knitr VisTrails Sumatra CDE and the Declaratron system Open source practices good programming practices trends in open science and the role of cloud computing in reproducible research Software and methodological platforms including open source software packages RunMyCode platform and open access journals Each part presents contributions from leaders who have developed software and other products that have advanced the field Supplementary material is available at www.ImplementingRR.org

Communicating with Data Deborah Nolan,Sara Stoudt,2021 Communicating with Data aims to help students and researchers write about their insights in a way that is both compelling and faithful to the data

The R series, 2011 *Statistical Computing in C++ and R* Randall L. Eubank, Ana Kupresanin, 2011-12-01 With the advancement of statistical methodology inextricably linked to the use of computers new methodological ideas must be translated into usable code and then numerically evaluated relative to competing procedures In response to this Statistical Computing in C and R concentrates on the writing of code rather than the development and study of numerical algorithms per se The book discusses code development in C and R and the use of these symbiotic languages in unison It emphasizes that each offers distinct features that when used in tandem can take code writing beyond what can be obtained from either language alone The text begins with some basics of object oriented languages followed by a boot camp on the use of C and R The authors then discuss code development for the solution of specific computational problems that are relevant to statistics including optimization numerical linear algebra and random number generation Later chapters introduce abstract data structures ADTs and parallel computing concepts The appendices cover R and UNIX Shell programming Features Includes numerous student exercises ranging from elementary to challenging Integrates both C and R for the solution of statistical computing problems Uses C code in R and R functions in C programs Provides downloadable programs available from the authors website The translation of a mathematical problem into its computational analog or analogs is a skill that must be learned like any other by actively solving relevant problems The text reveals the basic principles of algorithmic thinking essential to the modern statistician as well as the fundamental skill of communicating with a computer through the use of the computer languages C and R The book lays the foundation for original code development in a research environment
