 modeling techniques can often be seen to apply In keeping with the intent to show how Algebra 2 topics connect with real
 world applications textbooks commonly include several hundred word problems that are generally culled from situations that
 students may encounter often involving economics This book contains over 200 problems spanning 70 specific topic areas
 covered in a typical Algebra 2 course A selection of application problems featuring astronomy earth science and space
 exploration were then designed to support each specific topic often with more than one example in a specific category Each
 problem is introduced with a brief paragraph about the underlying science written in a simplified jargon free language where
 possible Problems are often presented as multi step or multi part activities The intent of these problems is not to follow an
 explicitly inquiry based approach but to systematically show students how problems and questions of a specific type are often
 solved Once students have mastered a particular approach there are many opportunities available for students to go beyond
 each problem and inquire about other connections that may suggest themselves as the student completes each problem or a
