#### STUDY GUIDE

Answers to Study Guide questions are below.

1. The Pentagon's Advanced Research Projects Agency (ARPA), is an agency of the U.S. Department of Defense. ARPA's goal was to build a network that (1) allowed scientists at different physical locations to share information and work together on military and scientific projects and (2) could function even if part of the network were disabled or destroyed by a disaster such as a nuclear attack. That network, called ARPANET, became functional in September 1969, linking scientific and academic researchers across the United States. By 1984, ARPANET had more than 1,000 individual computers linked as hosts. Today, millions of hosts connect to this network, which now is known as the Internet.
2. A host, more commonly known today as a server, is any computer that provides services and connections to other computers on a network.
3. The World Wide Web Consortium (W3C) oversees research and sets standards and guidelines for many areas of the Internet. The mission of the W3C is to ensure the continued growth of the web.
4. A dongle is a small device that connects to a computer. Broadband Internet service is known for its fast data transfer speeds and its always-on connection. Popular wired broadband Internet services include: cable Internet service, DSL, and FTTP. Wireless options include: Wi-Fi, mobile broadband, fixed wireless, and satellite Internet service.
5. A hot spot is a wireless network that provides Internet connections to mobile computers and devices. Follow these guidelines when using a hot spot: avoid typing passwords and financial information; sign out of websites when finished using an account; disable your wireless
