Discovery and Development Explained: Introductory Notes for the General Public Bruno Villoutreix,Jean-Luc Poyet,Katya Tsaïoun,2024-12-11 Drug discovery and development involve complex processes highly integrated interdisciplinary research and collaborations between academic groups and the private sector It is a long and resource intensive endeavor characterized by a high attrition rate Yet new strategies are being explored aiming at accelerating the development of novel treatments from the combination of artificial intelligence with cutting edge experimental approaches and the development of novel types of therapeutic agents to personalized medicine Because drug discovery and development is a vast field with many stakeholders and potential conflicts of interest it is important that the general public gains basic knowledge about the main concepts to be able to make informed healthcare decisions for themselves and family members understand discussions in the news and social networks or proposals from policymakers and politicians Furthermore people are directly affected by the field as patients seeking novel and better treatments as volunteers in clinical trials or as members of patient organizations Building public knowledge and understanding about the field of drug discovery and development will also help to address growing public concerns about how health data should be collected and used **Integrating**

Discovery-Based Research into the Undergraduate Curriculum National Academies of Sciences, Engineering, and Medicine,Division of Behavioral and Social Sciences and Education,Division on Earth and Life Studies,Committee for Convocation on Integrating Discovery-Based Research into the Undergraduate Curriculum,2016-01-07 Students who participate in scientific research as undergraduates report gaining many benefits from the experience However undergraduate research done independently under a faculty member s guidance or as part of an internship regardless of its individual benefits is inherently limited in its overall impact Faculty members and sponsoring companies have limited time and funding to support undergraduate researchers and most institutions have available or have allocated only enough human and financial resources to involve a small fraction of their undergraduates in such experiences Many more students can be involved as undergraduate researchers if they do scientific research either collectively or individually as part of a regularly scheduled course Course based research experiences have been shown to provide students with many of the same benefits acquired from a mentored summer research experience assuming that sufficient class time is invested and several different potential advantages In order to further explore this issue the Division on Earth and Life Studies and the Division of

Behavioral and Social Sciences and Education organized a convocation meant to examine the efficacy of engaging large numbers of undergraduate students who are enrolled in traditional academic year courses in the life and related sciences in original research civic engagement around scientific issues and or intensive study of research methods and scientific publications at both two and four year colleges and universities Participants explored the benefits and costs of offering students such experiences and the ways that such efforts may both influence and be influenced by issues such as institutional governance available resources and professional expectations of faculty Integrating Discovery Based Research into the Undergraduate Curriculum summarizes the presentations and discussions from this event **McGraw-Hill Education 5**
